

## Cement Tile Sealant Recommendation & Info

**Not all sealants are best for sealing your hand crafted cement tiles!**  
**Please use our recommended products below. If you decide to use another product be sure to test it on a few tiles before using it on the entire installation.**

We recommend using our in-house sealants, Impregnating Sealant and Topical Sealant. After testing many sealants, we have finally found a product system that works perfectly with our tiles. Our sealant products are very easy to apply and offer a beautiful finish available in either matte or semi-gloss.

The Impregnating Sealant will protect the entire tile from moisture. The Topical Sealant will protect the surface of the tile from stains, scratches, and other blemishes.

You will use the Impregnating Sealant only for your first coat of sealant and the Topical sealant for all coats applied thereafter. Please refer to Part D of our Cement Tile Installation Instructions for detailed information on application.

***Please remember to make sure your cement tiles are 100% clean before sealing. You will also need to make sure the tiles are kept clean throughout the installation and sealant process to ensure a seamless installation.***

***Please contact us for any questions or clarification needed.***
