## Chemikalien Verbotsverordnung

On 19 February 2020, Eurofins Product Testing A/S received a sample of a wooden panel with the product name:

**Kronogen FR**

supplied by

**Kronospan Luxembourg SA**

The emissions were tested according to Chemikalien-Verbotsverordnung with reference to EN 16516 (October 2017) and with the specifications outlined in Bundesanzeiger (BAnz AT 26.11.2018 B2), see the test report no. 392-2020-00086204\_QC\_EN.

The test was performed with loading  $1.8 \text{ m}^2/\text{m}^3$  and with a ratio of uncovered edges to surface area of  $1.5 \text{ m}/\text{m}^2$ . The chamber was operated with an air change rate of 0.5 /h, relative humidity of  $50 \pm 3\%$  and temperature of  $23 \pm 1 \text{ }^\circ\text{C}$ . The emission of formaldehyde was measured after 28 days in the test chamber

The test results of the tested sample indicate that the product comply with the requirement of Chemikalien Verbotsverordnung regarding formaldehyde emission

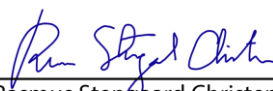

### Evaluation of the emission test result according to Chemikalien Verbotsverordnung:

- Formaldehyde after 28 days was below or equal to the limit of 0.1 ppm
