

INSTRUCTIONS FOR YOUR PRODUCT

Thank you for your recent purchase of this hand-crafted garden fountain. We have taken great care to create this piece especially for you. Please review these instructions and assemble this piece with care.

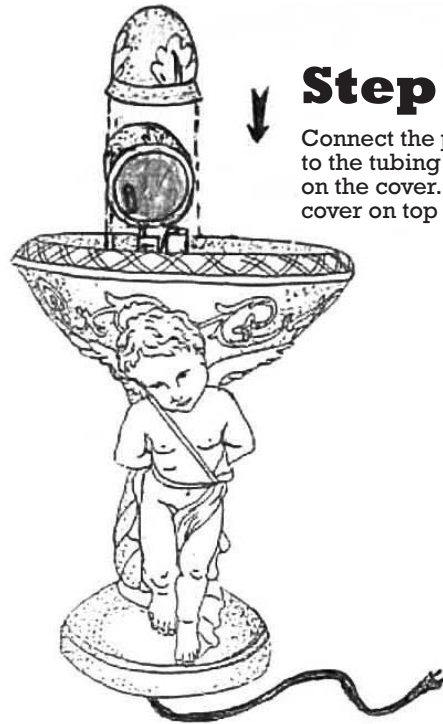

Step 1

Place the pump inside the pipe and pull power cord out through the bottom.

Step 2

Connect the pump to the tubing located on the cover. Place cover on top of pipe.

Step 3

Fill the reservoir with water to completely submerge the pump and take a note of the level that the water reaches for future reference when topping off.

Step 4

Plug in pump. After a short while the water will start to flow. Add water as needed.

Adjust the pump flow rate to achieve the desired effect and to minimize any splashing. Splashing can occur if the flow rate is too high or the feature water level is too full. The flow rate can be increased or decreased by moving the flow rate control slider on the pump body. Moving the switch towards (+) will increase the flow rate and moving it towards (-) will decrease it.

WARNING:

Never turn on the pump before the fountain is full of water. Also do not let the water level fall below the top of the pump as the pump will become damaged if ran without water. Fountain should be placed on a level surface.

THANK YOU FOR
YOUR PURCHASE
