

CYLINDER TUBES MATTRESS ASSEMBLY INSTRUCTIONS

FREE FLOW CYLINDER TUBES

WAVELESS CYLINDER TUBES

IMPORTANT PRODUCT NOTES/ PLEASE READ:

CAUTION: To prevent damage to the cylinder tubes, never place them on a rough surface. Do not drag the cylinder tubes. Keep them away from sharp objects. Do not overfill the cylinder tubes.

NOTE: Use all provided cylinder tubes. Amount of cylinder tubes used per mattress size(s): **Twin:** 4 Cylinders, **Full:** 6 Cylinders, **Queen:** 7 Cylinders, **W/King:** 9 Cylinders and **E/King:** 10 Cylinders.

FREE FLOW CYLINDER TUBES INSTRUCTIONS:

1. Remove the pull caps and insert plug from tube.
2. Fill each cylinder with warm or tepid water at a sink or bathtub. Add a specially formulated waterbed conditioning tablet.
3. Fill the tube to the fill line noted on the cylinder that best suits your personal comfort requirements. Suggestion: Use less water upon filling and add more little by little to discover your optimum comfort level. **DO NOT OVERFILL CYLINDER TUBES.**
4. After filling cylinders, be sure to wipe off excess water.
5. Slowly lay cylinders down flat to force air out of them. This is called "burping" the air out.
6. Replace insert plug into the tube valve stem. Screw cap on evenly & tightly. Do not cross thread, then push valve stem into cylinder so that top of cap is flush with cylinder. Repeat with all cylinders.
7. Next, place one cylinder lengthwise, so it's running head to foot inside the foam safety lined tray. Lay it in the center of the tray. Each subsequent tube should then be installed working your way toward the foam side rails. Make sure cylinders are snug, but do not overlap each other. **NOTE: VALVES SHOULD BE AT THE FOOT END OF THE BED.**
8. To prevent possible condensation, let the water in the cylinder tubes reach room temperature before covering the cylinder tubes with the quilted zipper or shell top.

WAVELESS CYLINDER TUBES INSTRUCTIONS:

1. You must be careful not to allow the insert to slide to one end.
2. While filling tube, hold insert firmly so it cannot shift.
3. Fill each cylinder with warm or tepid water, preferably in a bathtub or in foam safety lined tray - where the tubes can be filled lying flat.
4. If installing foam filled cylinders, carefully walk on cylinders with socks on feet to expel air from foam. Then remove cap and plug and repeat Steps 5 and 6.
5. **NOTE:** While transporting tube from the tub to the bed, hold the insert firmly so it cannot shift out of place.

CARE AND MAINTENANCE INSTRUCTIONS:

NOTE: You can be assured of years of comfort and performance if you follow these simple instructions.

1. Use a mattress pad to protect the mattress.
2. Always use proper supporting foundation under the mattress.
3. Be sure to "burp" your cylinder tubes to reduce noise and increase waterbed comfort. Be sure to add waterbed conditioning tablet.
4. Keep cylinder tubes surface clean & free of dirt or rough/sharp objects.
