

FAQ About Your Solid Wood Sign

What kind of wood are your signs made of?

Our frames are made of locally sourced and sustainably harvested walnut and the boards that make up the face of the signs are usually basswood, aspen, and sometimes cherry. They are all hand-painted before heading off to the printer for their design.

Where are your signs made?

Right out of Edgewood, Iowa, USA. Kendrick Home is a division of Kendrick Inc. which houses Iowa's largest sawmill. These signs are made from high-quality bi-product. We are family owned and operated.

Are you environmentally friendly?

We hold ourselves environmentally responsible and strive to practice our profession in an environmentally safe manner. In doing so, we continually improve our process to achieve minimal waste and we use vendors that have that same mentality. No sign goes to waste! Anything that does not pass our quality control is then chipped down into mulch. Sawdust collected off our saws is used to heat our kilns at the sawmill.

How do I hang my wood sign?

The majority of our signs are free-standing and can be stood up directly by their frame. Small sizes can be hung from the walnut frame lip on the back with one or two screws. Our large sizes (24x24, 30x24, 36x12, 36x18, 36x24, 40x20, 40x32, 48x16) come with a wire hanger and instructions for easy hanging. Our 16" Circle comes with a sawtooth hanger on the back.

Why are there lines through my wood sign?

This is not a line or crack that you are seeing, but the seam where the two pieces of wood that make up the face of the sign meet. All of our signs are made out of real American Hard Wood and are built with 4-inch-wide pieces that are stapled together, printed on, and then framed. This is simply the line that the boards make when they come together. This seam may expand and contract with the humidity level the wooden sign is kept in as the hardwood breathes.
