Owner & Care Guide

Setup, comfort and daily care

1 Proper Foundation & Support

Use the mattress on a level, structurally sound foundation appropriate for the mattress size.

- Compatible support may include a platform bed, supportive slatted base, foundation, or suitable adjustable base.
 - Make sure slats and center support are appropriate for the bed size and do not allow excessive sagging.
 - Improper support can affect comfort, edge stability, product performance, and warranty coverage.
-

2 Cooling & Pressure Relief

Cooling gel memory foam and breathable construction are designed to help manage heat while cushioning common pressure areas.

- The medium-firm feel is intended to balance contouring comfort with responsive support for back, side, and stomach sleepers.
 - Pocket coils respond independently to body movement and help reduce motion transfer across the sleep surface.
 - Reinforced edge support helps create a more stable perimeter when sitting or sleeping near the edge.
-

3 Break-In & Comfort Adjustment

- A new mattress may feel different from a showroom or previous mattress during the first several nights.
 - Body impressions caused by normal settling of comfort materials may develop as the mattress adapts to use.
 - Room temperature can affect the feel of memory foam; cooler rooms may make the surface feel temporarily firmer.
-

4 Cleaning & Protection

- Use a breathable mattress protector to help guard against spills, stains, and everyday moisture.
 - Spot clean only with a mild detergent and cold water. Do not soak or saturate the mattress.
 - Allow the cleaned area to dry completely before adding bedding.
 - Do not machine wash the mattress or use bleach, harsh solvents, or high-heat cleaning methods.
-

Owner & Care Guide

Handling, longevity and customer support

5 Moving & Handling

- Use two people whenever possible when moving the mattress.
 - Avoid dragging the mattress across rough floors or sharp edges.
 - If handles are present, use them for positioning only; do not rely on them to carry the full mattress weight.
 - Do not fold the mattress unless your specific setup is designed to accommodate an adjustable-base bend.
-

6 Rotation & Everyday Use

- Rotate the mattress head-to-foot periodically if desired to encourage more even wear.
 - Do not flip unless the specific model is clearly identified as double-sided.
 - Keep the mattress dry and well ventilated, and avoid prolonged exposure to direct sunlight or damp conditions.
 - Use the mattress for normal residential sleeping purposes; concentrated impact such as jumping can damage internal components.
