Table Clock Instruction

How to place battery in the Table Clock?

1. Remove the clock back cover from the curved slots of the side frame by your fingers and find the battery compartment.
2. Prepare battery: remove battery case lid if needed, and find battery requirements on the product details page or inside the battery compartment.
3. Insert battery: place the battery into the compartment, ensuring the correct polarity.
4. Set correct time: turn the hand setting knob to move hands forward. Do not turn the hands counterclockwise to avoid gear damage.
5. Test: check if the clock is working properly.
6. Assemble the back cover to the right place.

If you have replaced the batteries twice and the clock still isn't working, follow these steps:

1. Check if the battery is correctly installed and well placed.
2. Check if the clock hands are overlapping. If they are, please adjust them manually.
3. If the above steps still don't work, contact us to get a replacement.

(Note: The appearance and battery size of the table clock might vary, yet the steps are the same.)
