

CEILING FAN INSTALLATION MANUAL

READ AND SAVE THESE INSTRUCTIONS

If you have any after-sales questions, please provide this series number and model number at the time of inquiry.

**Models: #DCF52301
#DCF60301
#DCF70301**

CONGRATULATIONS ON YOUR PURCHASE

Congratulations on purchasing the latest in energy saving ceiling fans. This fan runs on DC (direct current) power which gives it the benefit of being super energy efficient whilst still maintaining high volume air-movement and silent operation.

Energy Saving - The DC motor is the latest technology in fan design. Its highly efficient motor saves up to 65% more energy than ceiling fans with traditional AC motors.

Silent operation - This DC fan motor is programmed with a stabilised current which efficiently reduces motor noise.

Low operating temperature - The DC power is managed effectively which brings down the motor operating temperature to less than 50°C. This results in a much cooler motor than a standard AC fan and increases the longevity of the motor.

6 speed remote control - Regular AC ceiling fans usually come with only 3 speeds, this DC fan comes complete with a 6 speed remote, which gives greater choice of comfort levels.

SAFETY PRECAUTIONS

Read and Save These Instructions

1. **WARNING** - To avoid possible electrical shock, before installing or servicing your fan, disconnect the power by turning off the circuit breaker of the fuse box to the outlet box.
2. **WARNING** - To reduce the risk of fire, electric shock, or personal injury, mount to outlet box marked "acceptable for fan support of 35 lbs (15.9 kg) or less" and use the mounting screws provided with the outlet box and/or support directly from building structure. Most outlet boxes commonly used for the support of luminaires may not be acceptable for fan support and may need to be replaced. Consult a qualified electrician if in doubt.
3. **WARNING** - To reduce the risk of fire or electric shock, do not use this fan with any solid-state speed control device.
4. **WARNING** - Do not insert foreign objects in between rotating fan blades.
5. **CAUTIONS** - The 52-inch, 60-inch and 70-inch fan blades should not touch the ceiling when operating, and the 70-inch fan blades are recommended to use 10-inch and 24-inch downrods.
6. **CAUTIONS** - All wiring must be in accordance with the National Electrical Code (ANSI/NFPA 70) and local electrical codes. Electrical installation should be performed by a qualified licensed electrician.
7. To reduce the risk of injury to person, the fan must be mounted with a minimum of 7 feet clearance from the bottom edge of the blades to the floor.
8. After marking electrical connections, spliced conductors should be turned upward and pushed carefully up into the outlet box. The wires should be spread apart with the grounded conductor and the equipment grounding conductor on one side of the outlet box.
9. This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to part 15 of the FCC rules. These limits are to provide reasonable protection against harmful interference in a residential installation. This equipment generates, uses and can radiate radio frequency energy and if not installed and used in accordance with the instructions may cause harmful interference to radio communications.

TOOLS REQUIRED

Ladder
Wire Strippers
Pliers
Phillips Screwdriver

PARTS LIST

Unpack your fan and check the contents. You should have the following:

- | | |
|------------------------------|---|
| 1. Mounting bracket x 1 | 10. Alternate wire terminal for motor x 1 |
| 2. Downrod ball assembly x 1 | 11. Remote control x 1 |
| 3. Ceiling canopy x 1 | 12. Machine screws x 2/Flat washers x 2 |
| 4. Coupling cover x 1 | / Spring washers x 2 |
| 5. Fan motor assembly x 1 | 13. Wood screws x 4 |
| 6. Blade mounting plate x 1 | 14. Wire nuts x4 |
| 7. Bottom cover x 1 | 15. Blade screws x 7 |
| 8. Fan blades x3 | 16. Allen key x 1 |
| 9. Remote receiver x 1 | 17. Balance kit x 1 set |
| | 18. Extension downrods x 2 |

MOUNTING OPTION

If there isn't an existing outlet box, then install one using the following instructions:

- Disconnect the power by removing the fuses or turning off the circuit breakers.
- Secure the outlet box (A) (not included) directly to the building structure. Use appropriate fasteners and materials (not included). The outlet box and its bracing must be able to fully support the weight of the moving fan (at least 35 lbs). Do not use a plastic outlet box.
- Figures below show three different ways to mount the outlet box (A) (not included).

This fan hanging system supports a maximum 20 degree angled ceiling installation. Fig. 4

NOTE: If you are installing the ceiling fan on a sloped ceiling, you may need a longer downrod to maintain proper clearance between the tip of the blade and the ceiling.

NOTE: The ceiling fan must be installed in a location so that the blades are spaced 300 mm from the tip of the blade to the nearest objects or walls.

NOTE: For angled ceiling installation, the opening of the mounting bracket (B) must be pointed toward the peak.

To hang your fan where there is an existing fixture but no ceiling joist, you may need an installation hanger bar (C) as shown in Fig.5. Make sure the hanger bar you purchase has been designed for use with ceiling fans.

INSTALLING MOUNTING BRACKET

Before you begin installing the fan, turn off circuit breakers and wall switch to fan supply line leads. **WARNING:** Failure to disconnect the power supply prior to installation may result in serious injury. To reduce the risk of electrical shock, the fan must be installed with an isolating wall control/switch.

Two options for installation, choose which one works for your location.

Remove an existing bracket prior to installation.

Only use the provided mounting bracket that came in your fan's box.

Option A: Use outlet box screws (provided with outlet box) when securing the mounting bracket to the fan-rated metal outlet box.

NOTE: Do not mount directly to sheetrock or ceiling tiles.

Option B: Use wood screws when securing the mounting bracket to the ceiling joist or support structure with an approved fan-rated electrical box.

If not mount to ceiling outlet box, use wood screws and flat washers and mount securely to the ceiling beam. Ensure at least 30 mm of the screw is threaded into the support.

BLADES INSTALLATION

Attach the fan blade to the fan motor assembly using the blade mounting plate and 6 blade screws, and tightening them securely with an Allen key.

WARNING: To reduce the risk of personal injury, do not bend the blade during assembly or after installation. Do not insert objects in the path of the fan blades.

Install the bottom cover to the fan assembly then secure it by turning clockwise.

WARNING:
DO NOT place fan on a flat surface once the blades are attached to the motor.
This will cause the blades to become unbalanced and result in a wobbling fan.

DOWNROD ASSEMBLY

Locate the downrod assembly. Loosen the ground screw on black hanging ball and setscrew to release the cross pin.

Remove ground screw and green ground wire.

Remove the hanging ball & lock pin & downrod pin from the downrod and save all parts.

Thread fan wires from motor assembly through downrod.

Place the downrod into the top of fan motor housing until holes for downrod pin align with holes in coupling.

NOTE: Make sure wires do not get twisted. Insert downrod pin through coupling and downrod, securing the downrod by tightening 2 security screws. Place coupling cover and canopy in between the downrod and hanging ball, then replace the downrod ball and insert cross pin through it before tightening setscrew against it. Finally, tighten ground wire using ground screw.

WARNING: Failure to tighten setscrew on downrod ball completely could result in fan becoming loose and possibly falling.

HANGING THE FAN MOTOR ASSEMBLY

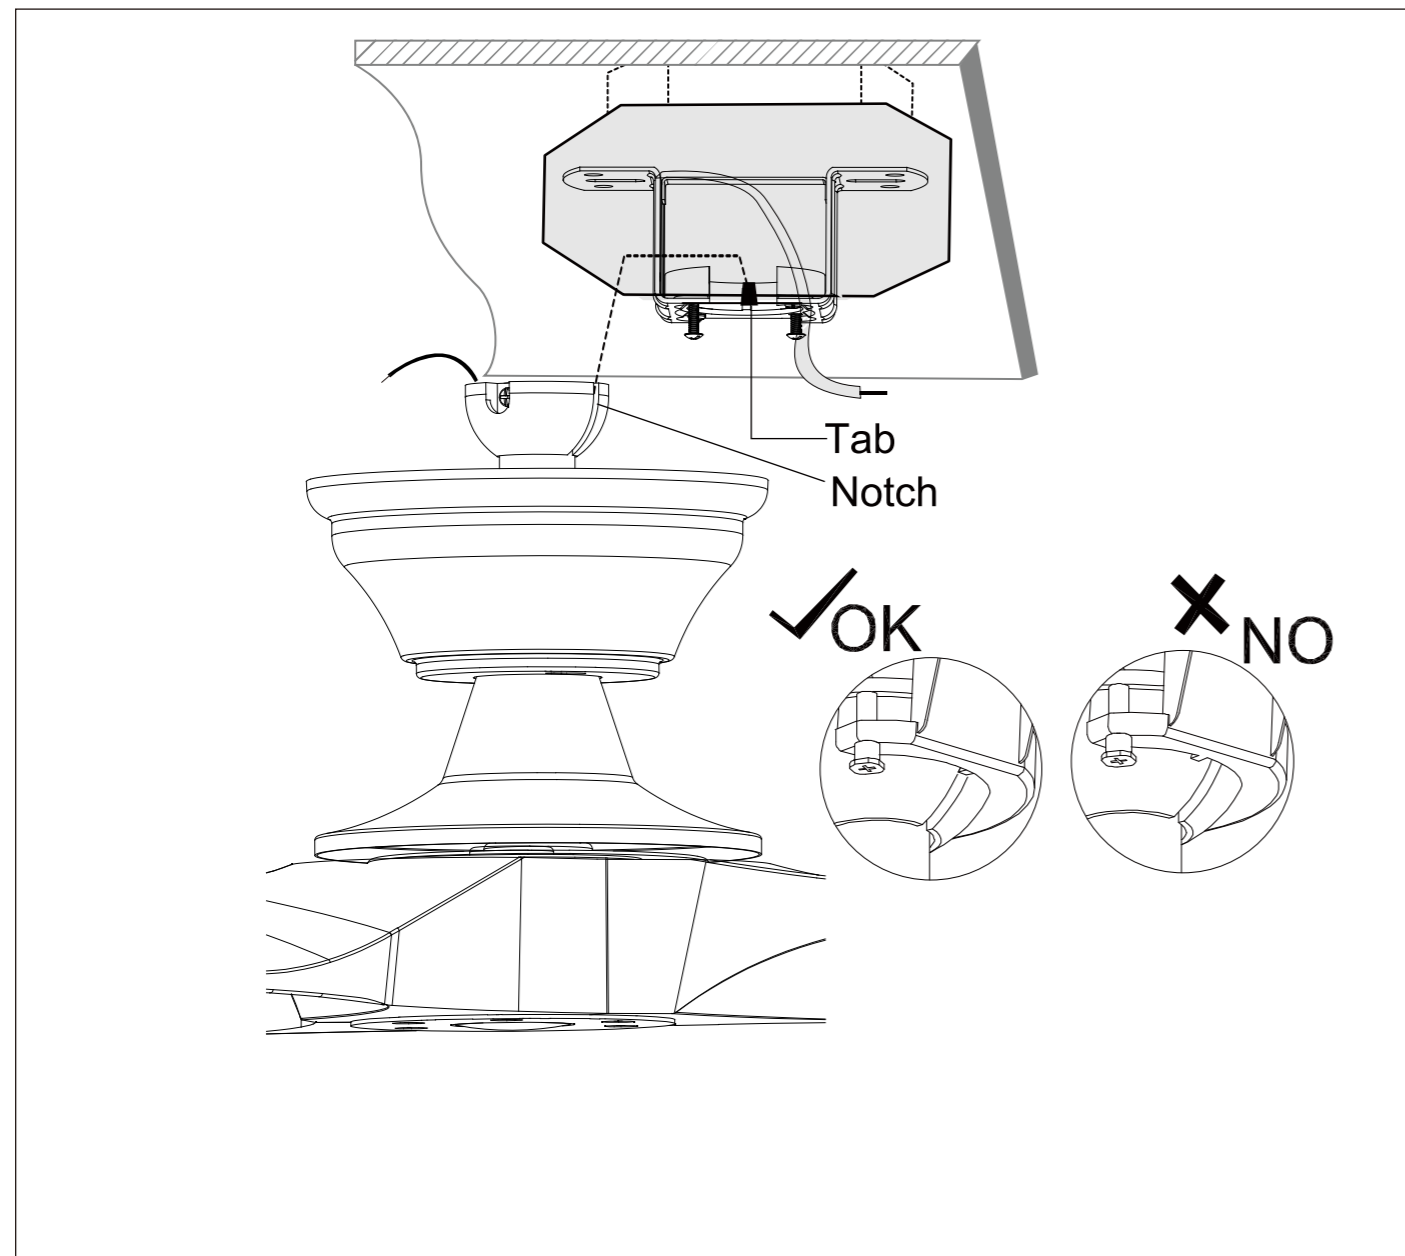

Carefully lift the fan motor assembly onto the mounting bracket that was attached to the outlet box.

Turn the entire assembly until the check tab (stopper of bracket) drops into the notch of the downrod ball and seats firmly.

NOTE: The entire fan motor assembly should not rotate when seated properly.

WARNING: Failure to seat tab in the notch of the hanging ball could cause damage to electrical wire and possible shock or fire hazard.

WARNING: To avoid possible shock, do not pinch wires between the downrod/hanging ball assembly.

WIRING DIAGRAMS

WARNING: To avoid possible electrical shock, be sure power is turned off at the main fuse box before installing.

Follow this wiring diagram.

When fan is secured in place on the mounting bracket, make electrical connections as follows:

Insert the motor wire terminal and light wire terminal into the corresponding interfaces of the remote receiver.

- Connect BLACK wire (AC IN L) from the outlet box to BLACK wire (AC IN L) from receiver.
- Connect WHITE wire (AC IN N) from the outlet box to WHITE wire (AC IN N) from receiver.
- Connect GREEN ground wire from the remote receiver & mounting bracket & hanging ball to ground wire (bare copper) from outlet box. Make sure to use wire nuts provided with your fan.
- Connect motor/AC power wire terminal to the corresponding socket of the receiver.
- Wrap each wire connection separately with electrical tape for extra secure connection.

NOTE: After wire connections have been made, turn leads upward and carefully push them into the outlet box. Separate black wires on one side of the box, white and green wires on the other side.

CANOPY ASSEMBLY

Locate 2 screws on the underside of the mounting bracket.

Rotate the canopy so that screws slide into the narrow ends of the slots.

Tighten the screws firmly.

REMOTE CONTROL OPERATION

FUNCTION INSTRUCTION OF EMITTER

Kindly Reminders

1. Your fan's remote and receiver have already been paired before. The learning mode is only necessary if they lose control during or after installation.
2. To use learning mode for pairing the remote with receiver, restore power to your fan and press & hold the "★" button. You must press the "★" button for 5 seconds within 60 seconds of restore the power to the fan. The pairing is successful until 3 beeps are heard.
3. If the remote can't control the receiver, check the battery's orientation and whether it's touching properly. Also, check if the battery is full or empty.
4. If the remote can't control the receiver, check if there are other similar remote-controlled products nearby. Products with the same frequency can interfere with each other.
5. A low battery voltage can reduce the remote's sensitivity and signal reception. Replace the battery when its voltage is low.
6. Remove the battery from the remote when you don't plan to use it for a long time.
7. When installing the fan, don't press the antenna (or other wires) with the fan's ceiling cover, or it could damage the wire and cause a short circuit or loss of control.
8. Ceiling fans with remote control system CAN NOT be operated in conjunction with any other control system EXCEPT a basic of On/Off wall switch if desired.

REPAIRING THE FAN'S RECEIVER & REMOTE

If the ceiling fan remote and receiver lose control after installation or during use, it is necessary to repair the pairing between them. Below are the symptoms and methods to repair the pairing:

Symptoms:

1. The fan only runs at high speed after installation.
2. No reverse function after installation.
3. Remote cannot communicate with the receiver.

To repair the pairing, follow these steps:

1. Turn OFF the main power to the ceiling fan for 30 seconds.
2. Press and hold the Pairing Button on the remote for 5 seconds until you hear 3 beeps within 60 seconds of switching the power ON to the receiver of the ceiling fan. Once the 3 beeps are heard, the pairing is successful.
3. Turn ON the fan and use the remote to change the speed to ensure that the operation and pairing were successful.

When installing multiple fans, each fan must be paired separately.

Here are the steps to follow:

1. Turn OFF the main power to both fans for 30 seconds.
2. Press and hold the Pairing Button on the remote for 5 seconds within 60 seconds of switching the power ON to the receiver of the first fan (e.g. "Fan A"). When the 3 beeps are heard, the pairing is successful.
3. Turn OFF the main power to the first fan that was paired (e.g. "Fan A").
4. Press and hold the Pairing Button on another remote for 5 seconds within 60 seconds of switching the power ON to the receiver of the second fan (e.g. "Fan B"). When the 3 beeps are heard, the pairing is successful.

If you have multiple fans such as "Fan A" and "Fan B" and want to control both with a single remote, ensure that they are located within 10 meters /32 feet of each other in the same room with no obstruction between them.

Follow the steps below to pair the remote with both fans:

1. Turn OFF the main power to both "Fan A" and "Fan B" for 30 seconds.
2. Press and hold the Pairing Button on the remote for 5 seconds within 60 seconds of switching the power ON to the receiver of both "Fan A" and "Fan B". When you hear the 3 beeps, the pairing is successful.

OPERATING YOUR FAN

SUMMER Mode: The airflow will be directed downwards, for cooling in summer.

WINTER Mode: The airflow will be directed upwards assisting in the circulation of warm air, for energy conservation in winter.

TROUBLESHOOTING

WARNING: Failure to disconnect power supply prior to troubleshooting any wiring issues may result in serious injury.

Problems	Solutions
Fan will not start.	<ul style="list-style-type: none"> - Check circuit fuses or breakers. - Ensure that the battery in the remote are installed properly and that they still have power. - Check all electrical connections to ensure proper contact. CAUTION: Make sure the main power is OFF when checking any electrical connection.
Fan sounds noisy.	<ul style="list-style-type: none"> - Make sure all motor housing screws are snug. - Make sure the screws that attach the fan blade to the motor hub are tight. - Make sure wire nut connections are not rubbing against each other or the interior wall of the switch housing. - Allow a 24-hour "breaking-in" period. Most noise associated with a new fan disappear during this time. - If using an optional light kit, make sure the screws securing the glassware are tight. Check that light bulb is also secure. - Some fan motors are sensitive to signals from solid-state variable speed controls. If you have installed this type of control, choose and install another type of control. - Make sure the upper canopy is a short distance from the ceiling. It should not touch the ceiling.
Fan wobbles.	<ul style="list-style-type: none"> - Check that all blade and blade arm screws are secure. - Most fan wobbling problems are caused when blade levels are unequal. Check this level by selecting a point on the ceiling above the tip of one of the blades. Measure this distance. Rotate the fan until the next blade is positioned for measurement. Repeat for each blade. The distance deviation should be equal within 1/8". - Use the enclosed Blade Balancing Kit if the blade wobble is still noticeable. - If the blade wobble is still noticeable, interchanging two adjacent (side by side) blades can redistribute the weight and possibly result in smoother operation.
Light does not work.	<ul style="list-style-type: none"> - Check for loose or disconnected wires in fan switch housing. - Check for loose or disconnected wires in light kit. - Remove light kit and check the plug connections if they are present. CAUTION: Make sure main power is turned off before entering switch housing and/or canopy.
Fan goes back and forth but does not start.	<ul style="list-style-type: none"> - Check all electrical connections to ensure proper contact. - If the wire connections of motor/light wire terminal are not in proper contact or broken, cut the broken terminal and use the alternative motor/light wire terminal (10 shows in the PARTS LIST) in the package to connect again. CAUTION: Make sure the main power is OFF when checking any electrical connection.

CARE OF YOUR FAN

Here are some suggestions to help you maintain your fan.

1. Because of the fan's natural movement, some connections may become loose. Check the support connections, brackets, and blade attachments twice a year. Make sure they are secure. (It is not necessary to remove fan from ceiling.)
2. Clean your fan periodically to help maintain its new appearance over the years. Use only a soft brush or lint-free cloth to avoid scratching the finish. The plating is sealed with a lacquer to minimize discoloration or tarnishing. Do not use water when cleaning. This could damage the motor, or the wood, or possibly cause an electrical shock.
3. You can apply a light coat of furniture polish to the wood blades for additional protection and enhanced beauty. Cover small scratches with a light application of shoe polish.
4. There is no need to oil your fan. The motor has permanently lubricated bearings.
