

INSTRUCTION MANUAL

FATWOOD FIRE STARTER

V1.0

How to Use:

Prepare Your Fire Area: Clear any debris from the area where you'll be starting your fire. If you're using a fireplace or stove, make sure the space is clean and safe.

Arrange the Fatwood: Place two to three pieces of fatwood in a crisscross pattern in the center of your fire area.

Light the Fatwood: Using a match or lighter, ignite the fatwood. The resin-rich wood will catch fire quickly and begin to burn hot.

Add Larger Logs: Once the kindling and fatwood are burning well, add larger logs to build your fire to the desired size.

Always follow fire safety guidelines to ensure a safe and enjoyable experience.
