

INSTRUCTION MANUAL

8.2X6.2X6.7FT
GREEN HOUSE

ATTENTION

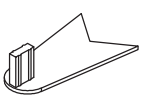

1. Please secure your greenhouse in windy conditions with extra ropes when wind speed exceeds 24 miles/hour.
2. Please try to install your greenhouse away from direct wind conditions.
3. Please keep your greenhouse clear of snow during snowy conditions. Snow coverage can not be over 2 inches high.
4. We will not take any responsibility of greenhouse damaged by severe weather.

PRODUCT ASSEMBLY

The ground must be firm and level. The greenhouse will only become permanent and stable if it is precisely aligned vertically and horizontally with a spirit level. Even with slightly sloping walls, these can no longer be properly inserted as the guides provided and can easily be removed by the wind. The greenhouse must definitely be anchored in the ground. The large surface of the Greenhouse offers a large surface area for wind, which can cause considerable injuries and / or property damage.

1 Installation of the foundation

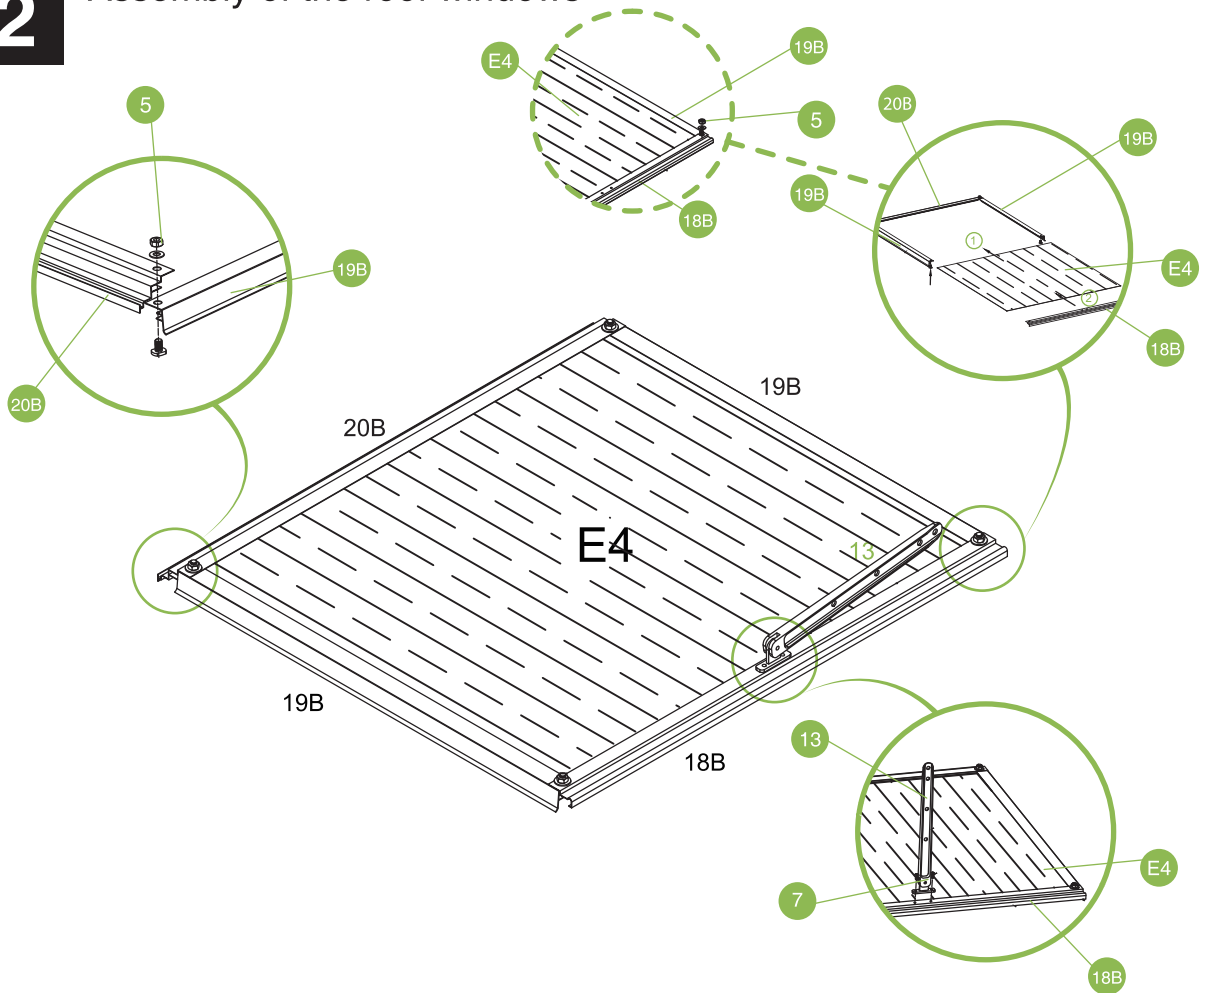

Before building the greenhouse, it is essential to have a suitable foundation prepared accordingly (included in delivery).

Assembly of the front wall

PRODUCT ASSEMBLY

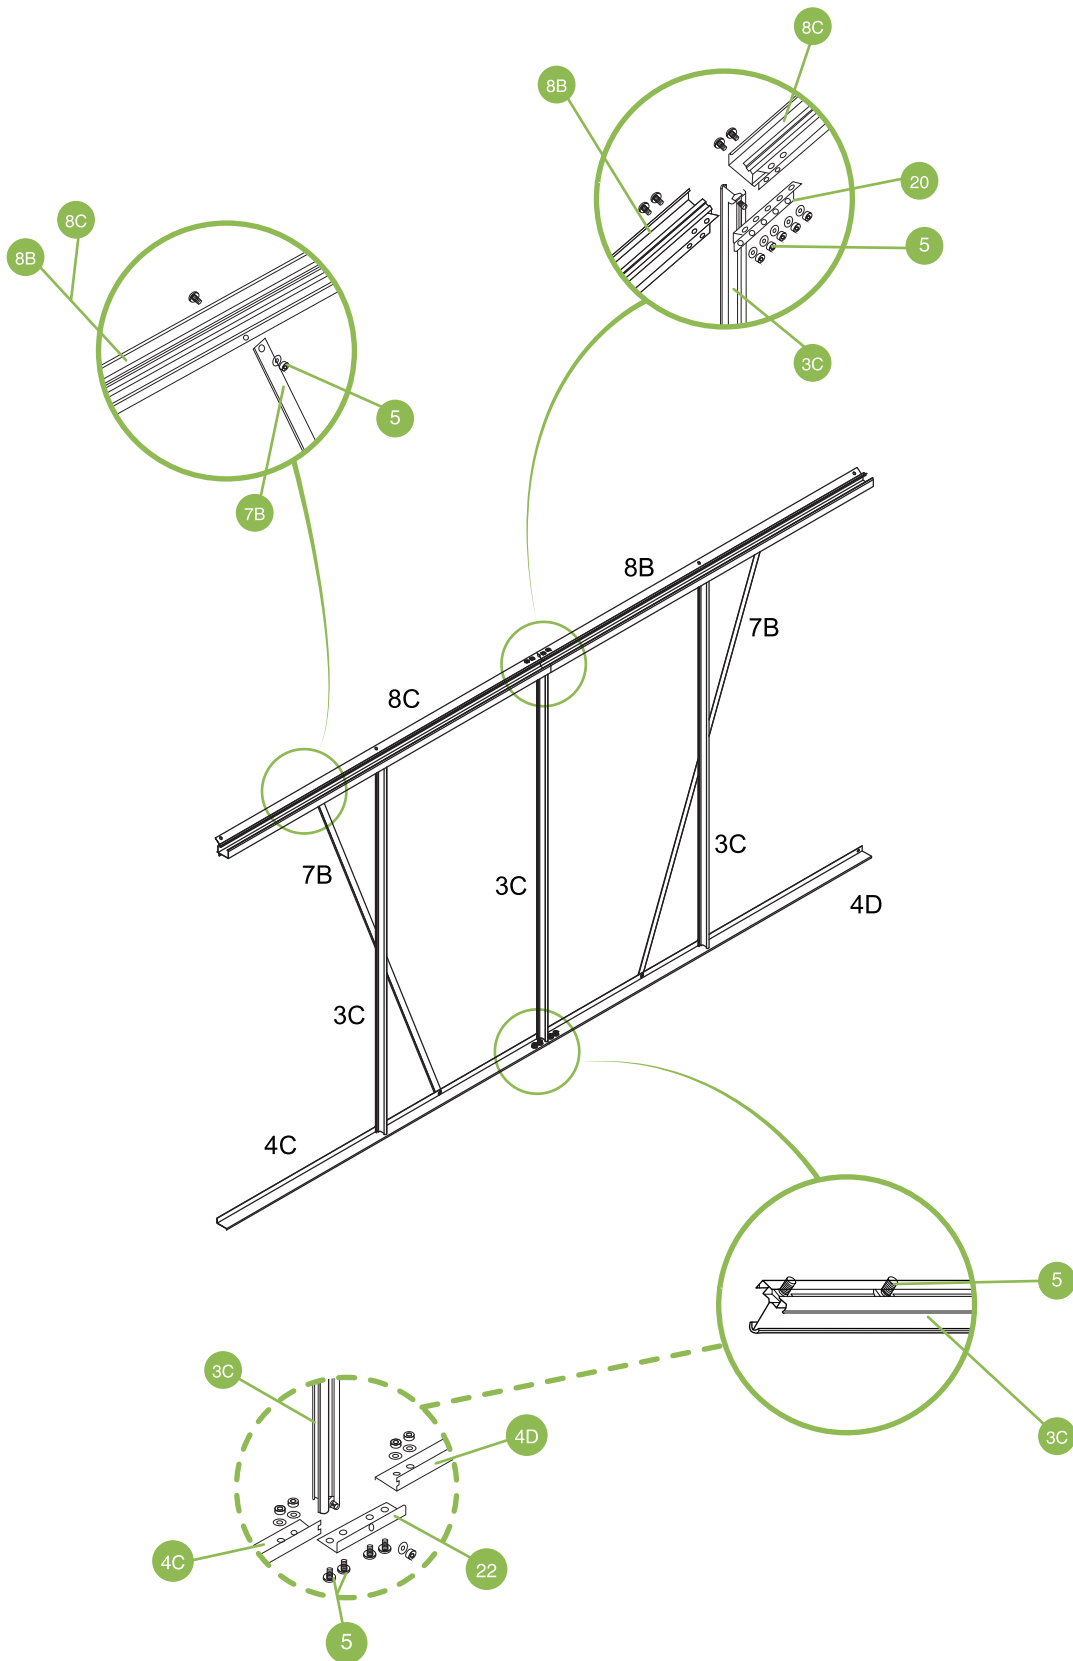

5

Attaching the door

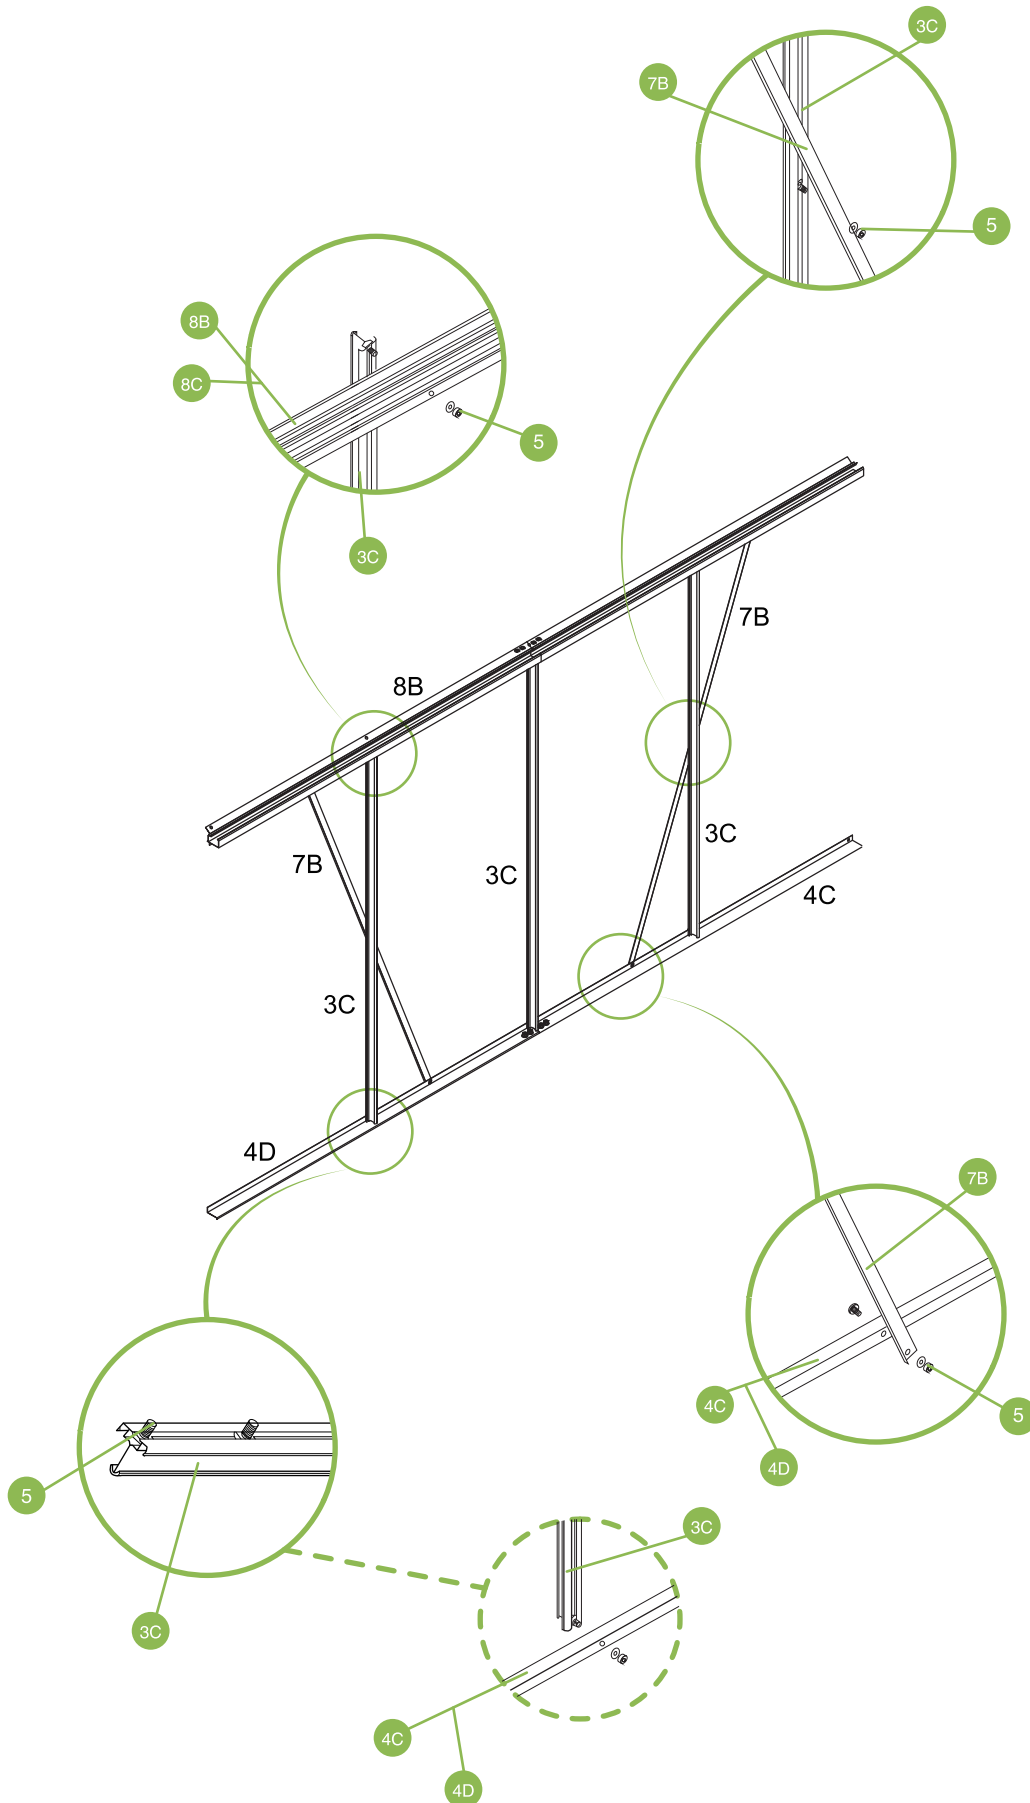

6

Assembly of the side walls

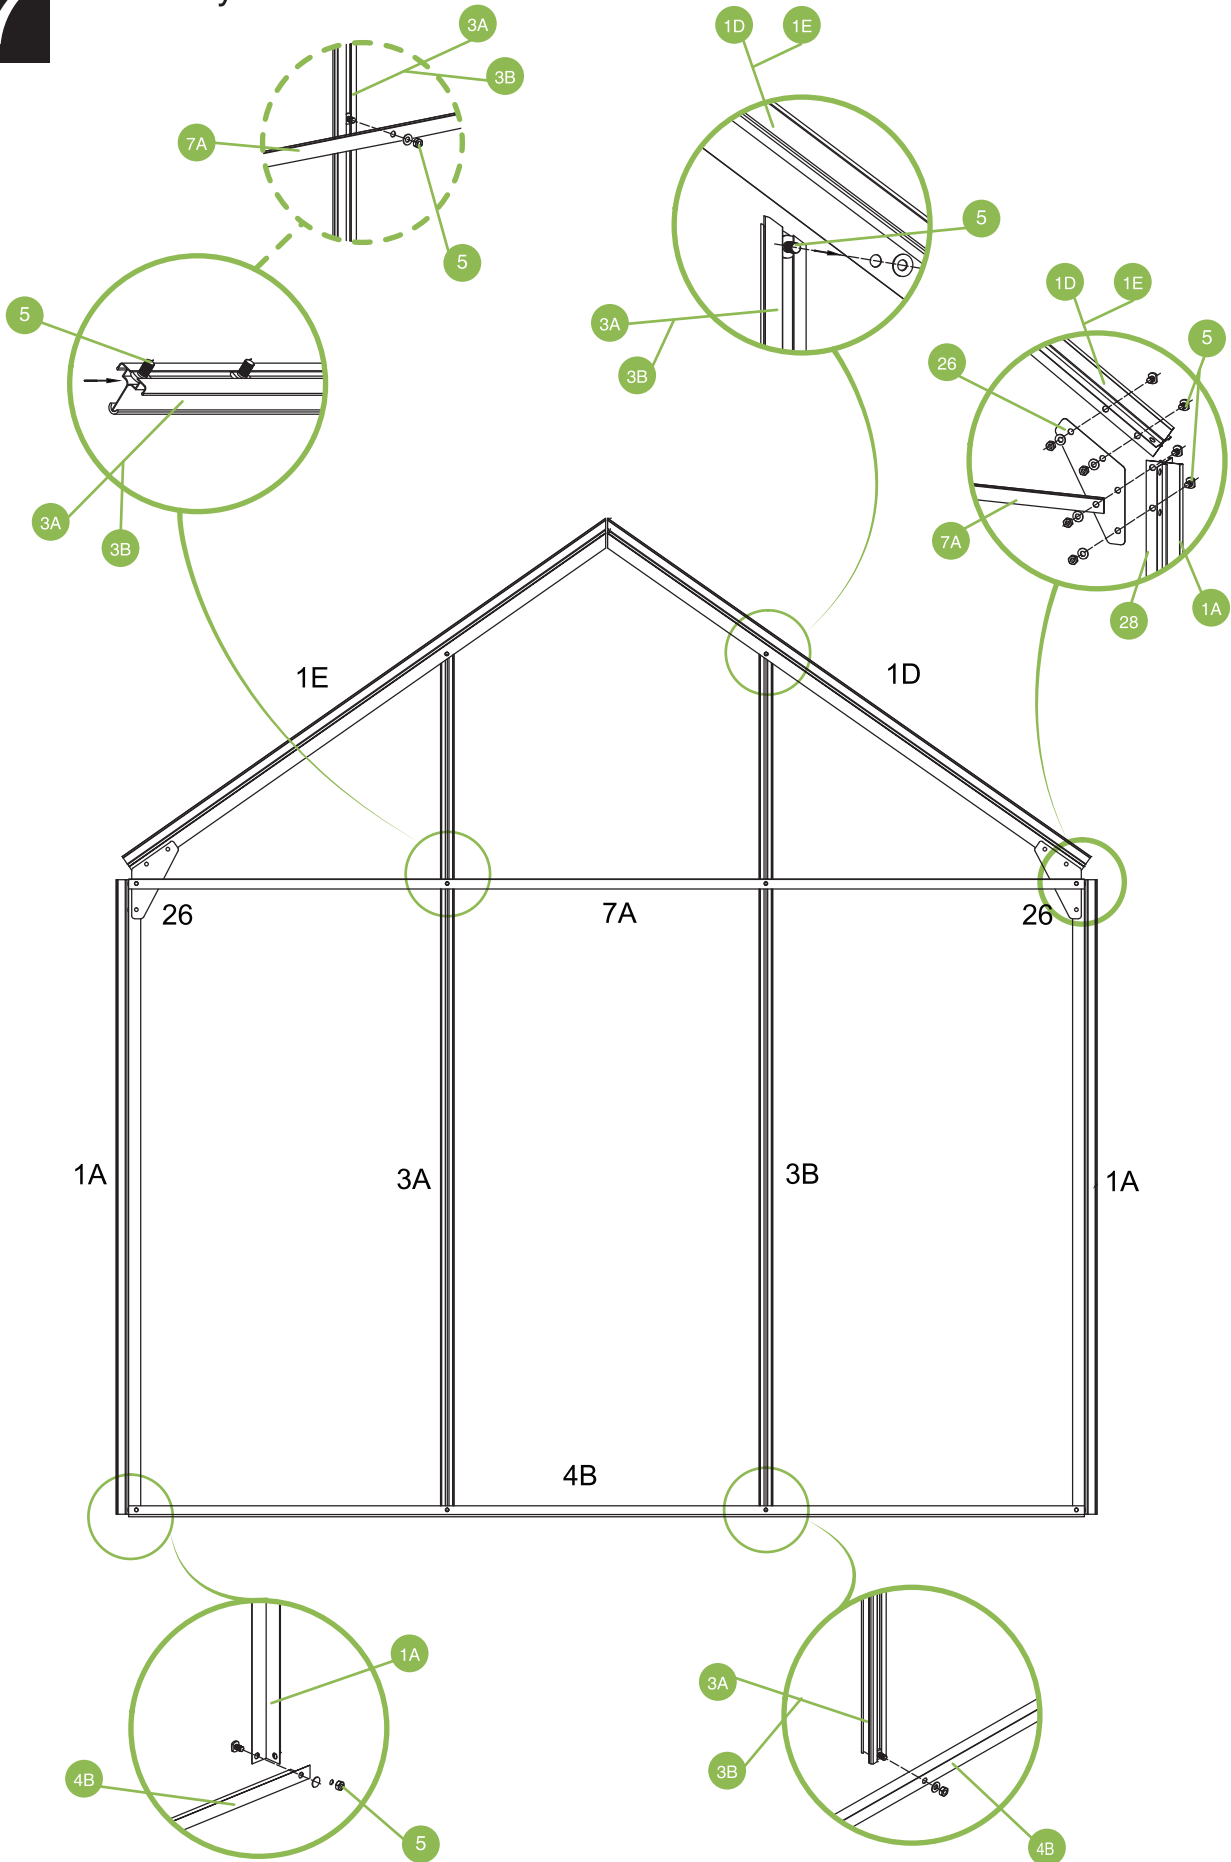

6

Assembly of the side walls

7

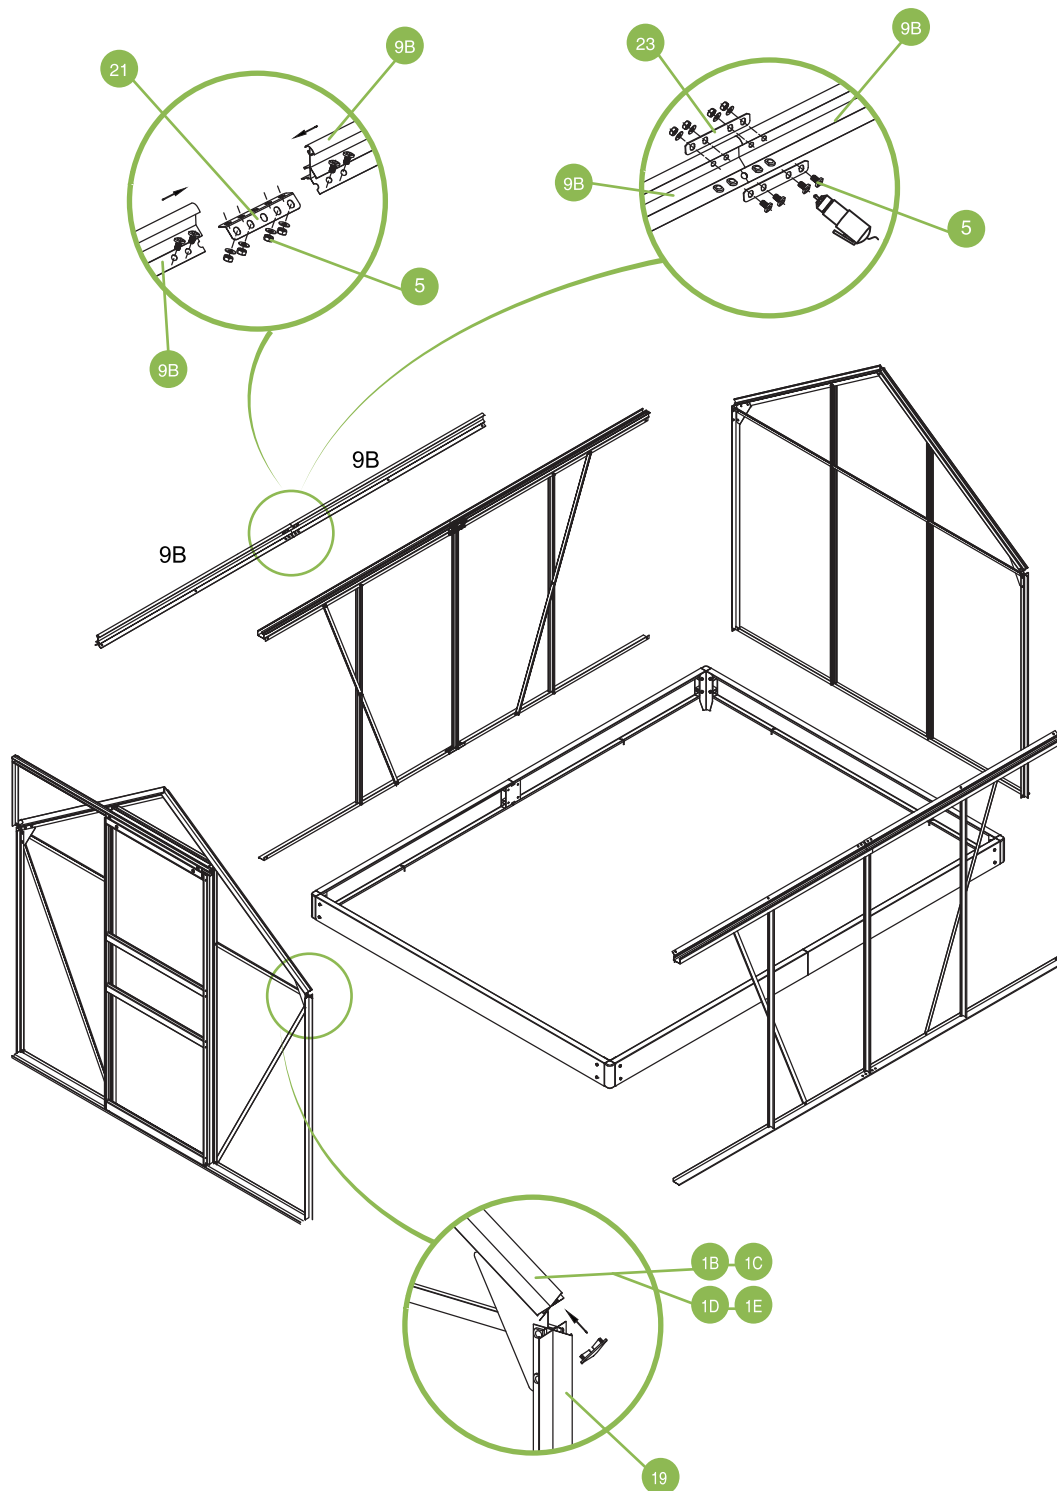

Assembly of the back wall

8

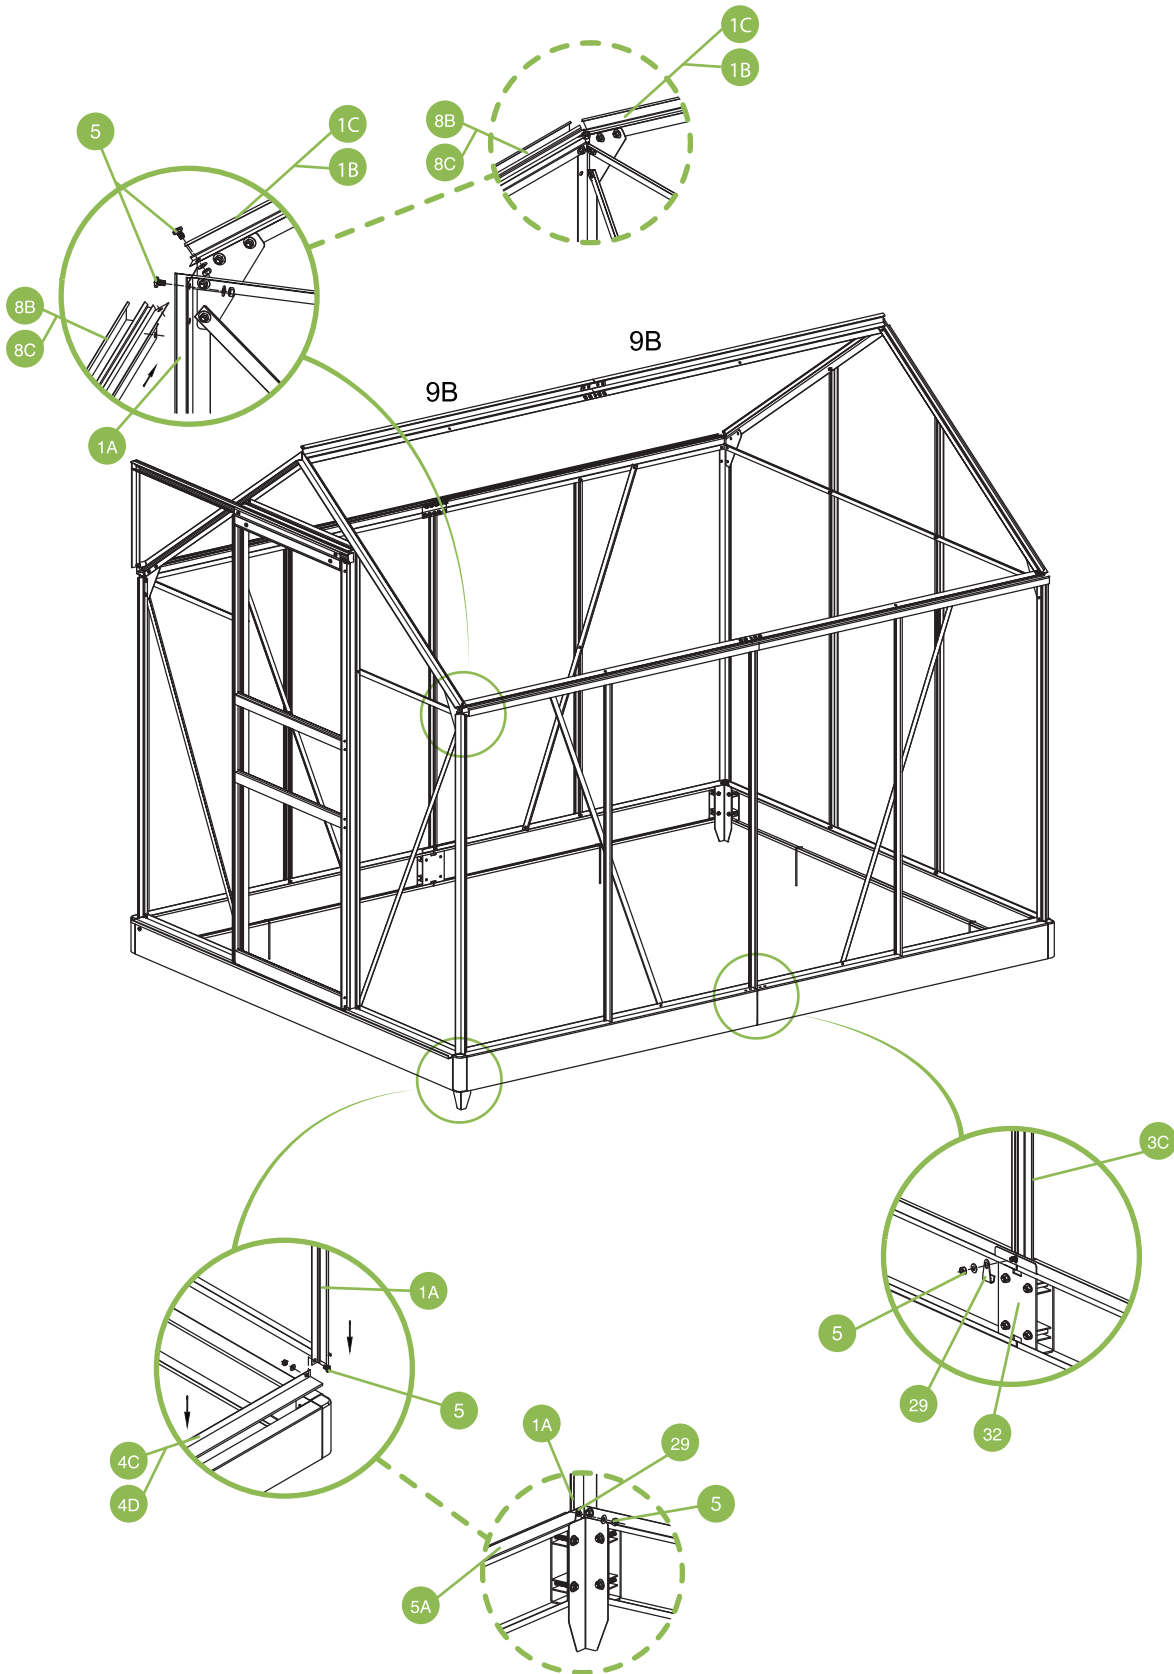

Assembly of the scaffolding

In order to assemble the 23 mounting plates in the right image 8.2, holes 9B in the 2-roofing cable profile must have been drilled with a battery screwdriver or a drilling machine. Please attach the 23 mounting plates to the position to be mounted on the 2x9B roof tile and mark the hole positions on the profiles. Then drill the 6mm holes. Attach the 23 mounting plates to the 2x9B roof panel with screws & nuts 5.
