

ASSEMBLING & INSTALLATION INSTRUCTIONS

The drawing shown may not exactly match the product enclosed. However, the installation instructions do apply to this product.

- ◆ **WARNING! SHUT POWER OFF AT FUSE OR CIRCUIT BREAKER.**
- ◆ **ATTENTION! COUPER LE COURANT AU FUSIBLE OU UN DISJONCTEUR.**

ASSEMBLING THE FIXTURE (Fig.1).

***Shut off the power at the circuit breaker and remove old fixture, including the old small hardware.**

1. Carefully unpack new fixture and lay all the parts on a clear surface. Take care not to lose any small parts necessary for installation.
2. Raise the shade(E) onto the top lamp holder of the fixture body(O), aligning the small thread holes with the mounting holes of cross frame, lock it securely with the screws(P).
3. Install the light bulbs(Not included) in accordance with the fixture specifications.
NOTE: DO NOT EXCEED THE SPECIFIED WATTAGE!
4. Raise the pipe nipple of the finial(A) insert cover (C) and lock it securely with the hex nut(D). Attach the cover(C) onto the shade(E), aligning the holes on it and lock it securely with hex nut(B).
5. Screw the pole(F),(G)and(H) together tightly. **Follow wiring instructions carefully (see fig.2).**
6. Put the pole(J) onto the concrete base using the mounting knob(K) until tight.
 - A. The depth of the base will depend on local soil conditions and frost line. The diameter of the base should be 305mm in order to hold the anchor bolts on the plate.
 - B. Take the three bolts(M) and run a hex nut(N) fully down each part of the threaded section. Insert the bolt(M) to the template (L) and secure with the second hex nuts.
 - C. Mix and pour the concrete into the former until it reaches the top. Push the assembly into concrete until the plate are 0.25 inches above the concrete. Leaving 2.5 inches of the thread above the concrete.
 - D. It is important to level the template before the concrete sets.
7. Install the fixture body together with the pole(F),(G)and(H) onto the pole(J), secure them using the machine screws(I).

CONNECTING THE WIRES (Fig.2)

***Feed the fixture wires through the pole(F),(G),(H).**

1. Take the black wire(hot) from the outlet box and the black wire of fixture and twist bare ends together. Twist wire connector onto end of wire until snug.
2. Repeat same process with white wire(neutral) from outlet box and white wire of fixture. **NOTE: Twist wires together in the same direction you twist the wire connector onto wires.**
3. If your outlet box has a grounding wire (green or bare copper), attach this wire and the bare copper wire from the fixture together as step 1.If junction box has no ground wire, attach the bare copper fixture wire to the green ground screw in the

bottom of the pole(J).

4. Tuck the wire connections neatly into the pole. Take the fixture body mount onto the pole(F).

Your installation is now complete. Return power to the junction box and test the fixture.
