Delta Shower Doors FAQs

1. How much depth is needed on base or sill of tub/shower for installation?
Traditional—2” Contemporary—2 7/8”
MOD 6mm—2 ¾” MOD 10mm- 3”

2. Do both doors slide or is one panel stationary?
Yes, Mod, Contemporary and Traditional Track styles all bypass/slide with no stationary panels. We recommend the inner glass panel be closest to the shower head to minimize water escaping the enclosure.

3. Can it be ordered with different handles?
Yes. Use the Delta Shower Door Configurator to see all the possible combinations.

4. Can it be installed on tile/marble/acrylic/fiberglass?
Yes, please ensure you use the appropriate anchors.

5. What anchors need to be used for tile installation?
The anchors provided with the Mod track are suitable for tile installation. If you choose to install the Traditional or Contemporary tracks into tile, we recommend any tile grade anchor.

6. Where can I order replacement parts?
Call customer care at 1.800.964.4850. Be sure to check all 3 packages before discarding. For the Traditional style shower door, the roller brackets and instruction sheets are located with the sliding shower door glass panels, not in the track assembly kit.

7. What is the difference between Framed, Semi-Framed and Frameless?
All Delta® shower doors feature 1/4” (6mm) or 3/8” (10mm) frameless tempered glass panels. Frameless doors are easier to clean than framed doors and provide an aesthetically pleasing look that enhances any bathroom by creating a more spacious feel. Framed doors offered by most manufacturers have an aluminum frame around each glass panel. Semi-frameless doors have aluminum top and bottom tracks and thicker metal side pieces paired with frameless glass giving it a blended look that's open and spacious but trimmed and finished.

8. Do I purchase everything separately?
Our 1-2-3 step program enables you to customize a shower door to your personal style and décor. Step 1: choose your glass, Step 2: choose your track, and Step 3: choose your handle or knob. With over 1,500+ combinations you will be sure to find something unique that you love! When you receive your order, be on the look out for three separate components that may arrive in separate shipments.

9. How does a 48"-60" Sliding Shower track work?
Our shower door track assembly kits are designed to fit a wide range of enclosures from 43-3/8" to just under 60" with a cut-to-size design that allows you to ensure a proper fit based on your final measurements. Please note, the track assembly kits can be cut to size, but tempered glass, however, cannot, so please be sure to purchase the correct size glass for your shower opening.

10. How does 27”-36” No Top Track Pivoting Door work?
The track assembly kit for our 27”-36” door can be installed by simply cutting the bottom track to the proper size for your enclosure. To cover a wide range of enclosures we offer three glass sizes that include 27”-30”, 30”-33”, and 33”-36”. Be sure to measure the interior width of your enclosure to determine which size glass you need.

11. What do I do if I mis-cut top and/or bottom tracks?
If track mis-cut is too long, take several measurements to assure of the correct value, then trim or file the track as required to the correct length. Reinstall per instructions. If mis-cut is too short by less than 1/4", then apply caulk to the gap created. If mis-cut is too short by more than 1/4", contact customer care at 1.800.964.4850, and we'll work with you in getting the replacement components you need to complete the installation.

12. Where can I find other glass?
If there is something that you want that may not be available at your local The Home Depot store you can check out the Delta Shower Door Configurator where you can find our complete offering which includes many unique and eclectic patterns. Conveniently, if you do find something on our website you can simply click the “add to cart” button and have it shipped right to your local The Home Depot store.
