INSTALLATION

1 PLANNING

Decide the overall size of your design and how many pieces you would like to use. Sketching will help to explore options. Another way of visualizing your creation is to adhere Post-it® Notes to your wall to represent each shape. Move the papers around until you are happy. Experiment with clustering and loose flowing.

- 1 ARRANGE
- 2 TWIST
- 3 ENJOY

2 INSTALLING

Our product is designed for easy installation. In soft material such as drywall, it is as easy as twist-and-go. For harder material, we recommend pre-drilling pilot holes using a 7/64" drill bit (2.8mm). The softer the material, the smaller the drill bit you will need. Drill your holes right through the Post-it® Notes.

3 BE CREATIVE

Our product is not just for vertical surfaces. Add splashes of texture and color almost anywhere. Favorite creative uses include flowing your design onto a ceiling and corner, applying to your garden fence, customizing furniture, and attaching to a found wood tree limb. Many styles are paintable and outdoor friendly. Have fun and enjoy.

TIPS

- **FOR CLUSTERING**, it is important to note the widest dimension of each style. This is the minimum distance required between each.
- **IF OVERLAPPING** of different heights, install the shorter one first, then the taller.
- **BROKEN SCREW?** Usually your substrate is too hard and a pilot hole is required using a 7/64" (2.8mm) drill bit. Remove the broken screw using needle nose pliers. Or leave as is and camouflage the broken screw with another component.
- **LOOSE FITTING?** Excessive unscrewing can make the screw hole less stable. Fill the hole with short pieces of toothpicks. Putting a small amount of glue on the screw can also help secure your product in thin drywall.
- **CAUTION.** Our product has sharp screws. Product is not made for use by children.
