installation instructions

Friendly Tip: Take a deep breath going in. This may be a tricky part, but nothing too overwhelming. Just follow these steps to the T and the outcome will be worth it!

- ⓘ While assembling the product, tighten the bolts up to 50%. Once all parts are in place, only then fully tighten the bolts.

step 1:

Start by placing the cleat (B) on the wall you want to hang the shelf (A) on. The cleat hangs with the angled side up and the angle facing against the wall. Put a spirit level on it to ensure it is straight aligned with the wall. Adjust if needed. Now, mark points on the wall through the holes on the cleat using a pencil. Ensure that one side of the marks comes in front of the stud.

Note: Wall plug is not needed at the location of the stud.

step 2:

Drill holes at the points you just marked.

step 3:

Using a screwdriver, insert wall plugs (D) inside the holes in the drywall.

step 4:

Now take the cleat (B) and fix it in place using screws. For drywall, insert screws (E) into the wall plugs. For stud walls, insert the screws (C). Use a screwdriver to make sure they are secure.

step 5:

Now, take the shelf (A) and place it on the cleat. Make sure the slots on the shelf are aligned with the cleat and not too close to the wall to prevent scratches and damage.

Note: Drawer includes a back stopper to prevent full removal.

step 6:

Turn the stopper upwards to lock it in place, preventing full removal. Similarly, turn it to the left, to take the drawer out.

Note: Drawer includes a back stopper to prevent full removal.

Voila! Your shelf is now installed and secure!
