

Signature Crown Straight Style

Precision-shaped fabric. Showroom-worthy custom valances.

Architectural fabric shaping. Regal custom style.

Turn beautiful fabric into a custom-fitted valance with the refined structure of a designer-built window treatment. The Signature Crown Straight **TraceShaper™** creates a polished straight valance with sculpted crown openings that feel tailored, architectural, and distinctly high-end. Shape your own fabric into a custom window feature with elegant crown detail, balanced proportions, and a finished look made for your room.

Shape the Center Span

Stretch the straight center span wider or keep it narrower to suit the window, fabric, motif, and overall design style.

Create a Designer Crown Profile

Use solids, textures, embroideries, refined prints, or statement fabrics to create a polished custom valance with carved architectural detail.

Design from Small to Wide Windows

Use a stretched crown layout for smaller windows, or repeat crown sections across wider spans for a grander custom look.

Center Span Design Options

Choose a narrow or wider center span for the look you want. The Crown Straight style gives you flexible control over the straight center span between the shaped crown sections. Keep the center span narrower for a more traditional, structured crown rhythm, or stretch it wider for a cleaner, more open architectural look.

This flexibility lets you adapt the design to your window size, fabric scale, and focal motif while keeping the crown sections balanced. Use elegant solids, woven textures, embroidered fabrics, geometrics, or refined prints to create a custom-fitted valance that feels tailored, polished, and designer-planned.

Stretched Crown & Repeated Crown Layouts

From compact windows to grand wider spans. For smaller windows, use a stretched crown layout with shaped crown detail near the side sections and a clean straight span through the center. This keeps the design elegant and custom-fitted without overcrowding a narrower window.

For wider windows, repeat the crown sections across the span to create a grand architectural rhythm. The repeated crown layout carries the shaped detail across the window while keeping the overall profile straight, structured, and refined. Adjust the layout to suit bedrooms, living rooms, dining rooms, powder rooms, wide windows, or side-by-side windows.
