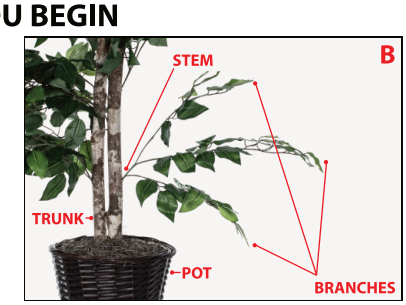
SHAPING INSTRUCTIONS

Estimated shape time 10-15 minutes

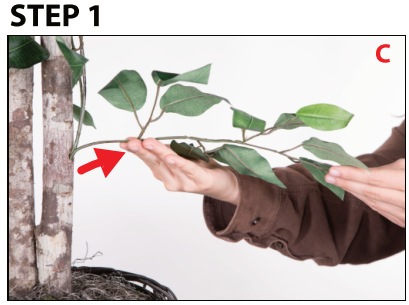
BEFORE YOU BEGIN



(Image A) Example of how the product will look right out of the box.

(Image B) Component diagram.

STEP 1



Begin with the stems at the base of the trunk, working upwards. Separate the branches on each stem before shaping them.

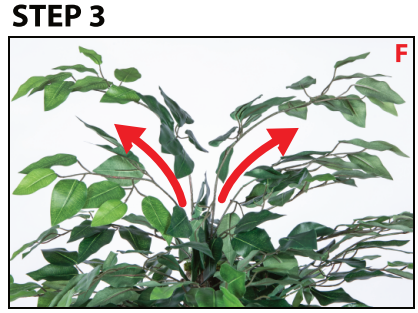
Next, starting at the base of the branch, **(Image C)** run your hand along the underside. **(Image D)** Doing so should create a smooth arc without any harsh bends.

STEP 2

After puting an arc in the branches, adjust them in a **stair-step** style so that they are at varying heights. This gives the plant a realistic appearance. **(Image E)**

Repeat steps 1 and 2 until you get to the top 2 stems.

STEP 3



When you get to the top, point these stems a little bit higher, so they are pointing at an upwards angle. **(Image F)**
