

Rear pillar * 2

Front pillar * 2

Second hole position from right to left

The marked hole position inside the circle is the horizontal bar hole position of the post installation column

First, install the horizontal bar on the rear pillar using internal hexagonal screws

Installation of layer boards from small to large

When installing the layer board with only one hole on it, be sure to face upwards

Install the front pillar crossbar using the hex socket screws

Buckle the installed front pillar in front of the rear pillar and tighten the top hole with flat head screws and nuts

(Installation completed) Then you can unfold the flower rack

Installed on the second hole of the front pillar

Tighten with flat head screws

The basket bracket needs to be installed on the inner side during installation

Install on the second hole of the front pillar and tighten with a flat head screw

Install the round rod in the middle of the hanging basket hook with an internal hexagonal screw

If you choose a hanging basket style, you need to install a hanging basket hook on the top and tighten it with flat head screws and nuts
