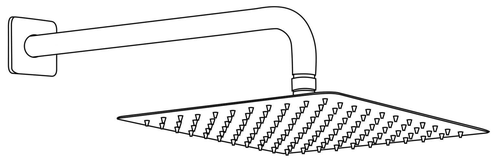
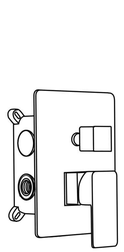
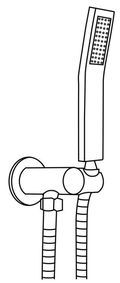
Installation

Tools Needed

- Adjustable Wrench
- Teflon Tape
- Groove Joint Plier
- Screwdriver
- Silicone Sealant







Maintenance

Your new faucet is designed for years of trouble-free performance. Keep it looking new by cleaning it periodically with a soft, damp cloth.
Avoid abrasive cleaners, steel wool and harsh chemicals as these will dull the finish and void your warranty.

Safety Tips

- If you use soldering for the installation of the faucet, the plastic protective cover, will have to be removed before using flame. Otherwise, the warranty will be vold on these parts.
- Protect your eyes with safety glasses when cutting or soldering water supply lines.
- Cover your drain to avoid losing parts.

Important Points

- Notice: the system is not compatible with tub spout and doesn't include tub spout.
- Prlor to begining installation, turn off the cold and hot water lines and turn on the old faucet to release built-up pressure.Wrap all threaded connections with a teflon tape. Always wrap in a clockwise direction.

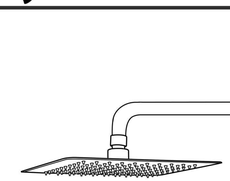
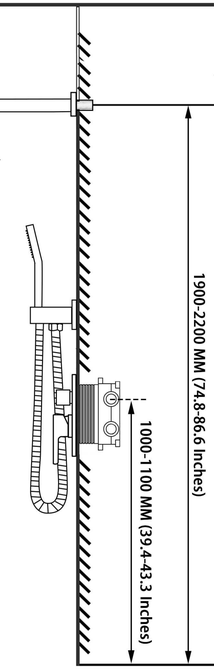
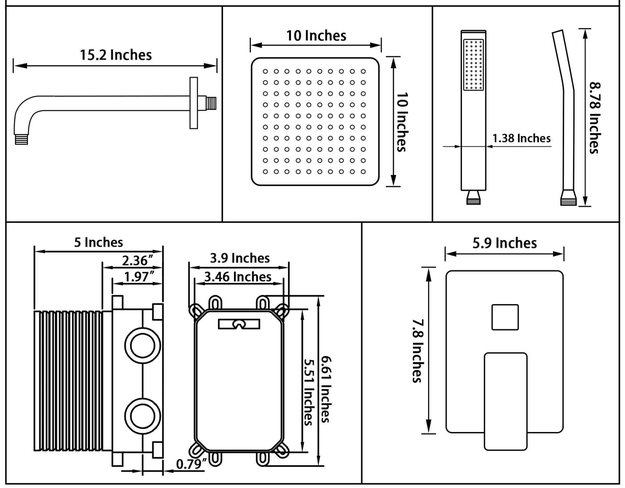
Preparation/Assembly

1 . Note the installation dimension between shower arm, handle.



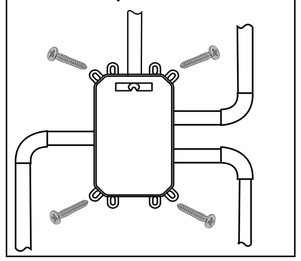


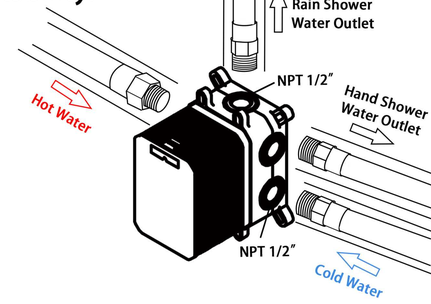
Product Dimensions



2. Please Note:Be sure the valve body is secured to the support cross board for stability.

You can fixed the valve body with the spare screws.





3. Turn on hot and cold water supply lines. Turn on the faucet and let the water from the showerheads for one minute to flush the debris from the line.
If there is a leak, refer to correct section and repeat step.

Turn the lever up to turn on the water
