Key points for installation

1. Requires the direction to face south towards the sun, and to be the best installation angle above the horizontal surface.

Please find the best installation angle according to the local latitudes.

2. Exposure the solar panels under the sun throughout the day. Don’ t sheltered them from buildings, trees and other obstacles.

Guarantee the longest time to exposure under the sun. (The solar panels must not be installed under glasses or inside house) Only by installing solar panels scientifically can the optimal charging effect be achieved.
