

# Maintenance Manual

## Avoid Direct Sunlight

Do not place leather sofas in direct sunlight, and avoid placing them near heat sources as it can cause them to become stiff and fade.

## Keep Leather Dry

In order to avoid white leather spots, the sofa must be immediately dried with a dryrag after wetting, and the wet cloth can not be placed on the leather surface for a long time.

## Correct Dust Removal

Wring out to 80% with a wet towel, gently wipe the dust on the sofa surface, and then ventilate to dry the excess water on the sofa surface.

## Use a professional leather care cream

Please maintain the leather sofa regularly, the general maintenance period is three months. Please use a professional leather cleaning cream to wipe, before use, please conduct a small area of fading test in an inconspicuous location.

## Avoid cutting the sofa with sharp objects

Do not rub the leather with sharp hard objects: avoid staining the sofa with oil, nib, ink, etc.

## **Try not to add extra sofa coverings**

Sofa cover cushion and sofa friction easily damage sofa surface leather; The sofa cushion covers the sofa for a long time, and the sofa surface is easy to breed bacteria and mites.

## **Do not use alcohol and other corrosive agents to clean the sofa**

Leather is made of animal skin processing, it is strictly prohibited to use brush, hard cleaning cloth and other violent cleaning, to produce skin, fading, deformation and other problems.

## **Ensure Good Ventilation**

Leather furniture is made of the first layer of cowhide, naturally with the taste of cowhide itself. In addition, after the completion of the production inspection, we will pack the sofa in the first time to prevent damage. Therefore, when you receive the sofa, the smell of the leather may not have completely dissipated, which is harmless and can be removed by keeping ventilation for 1-2 weeks.
