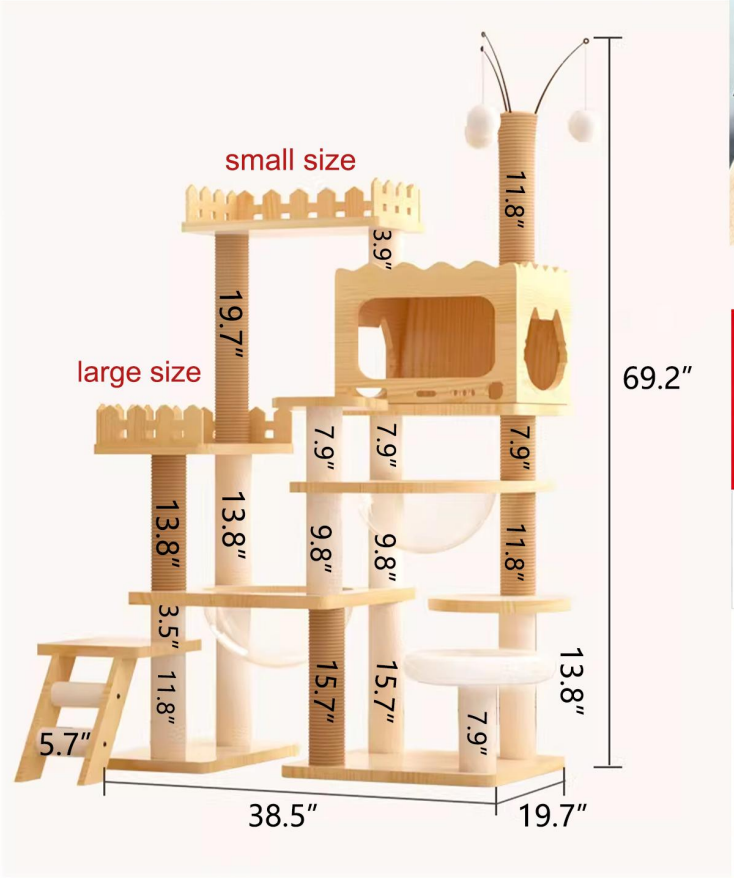
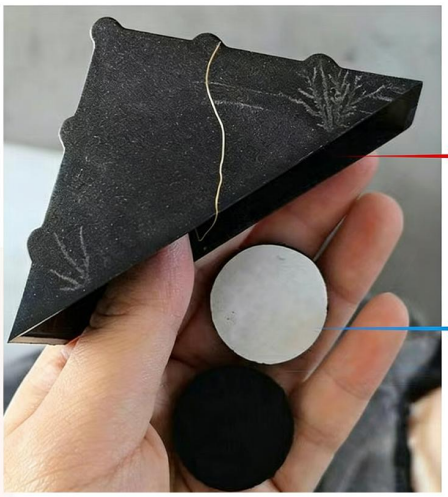
Installation step diagram

Please note that the two boards on the upper platform are divided into small and large sizes, and some of the column sizes are similar. Be careful not to mix them up





Protecting the board during transportation
Not for installation

Anti-slip pads attached to the four corners of the base plate
Do not attach them to the screws on the base plate

Stair installation steps:

1. install the small iron sheet onto the ladder board.
2. fix the stair board onto the climbing frame board.
3.make sure to install the pillars on the ladder as well! The steps are what support the two sides of the ladder.

The steps are what hold the sides of the ladder apart. You can fix them by applying force and keeping them in place. Otherwise, they might loosen over time.

Refer to the pictures and text for installing stairs.
The cap screws are divided into long and short
