

IMPORTANT:

Please note that the light is designed to work in the dark. If there are strong light sources nearby then the LED may be very dim or not work at all. Although the manufacturer has charged the battery, the charge levels will have decreased when you receive it. Please charge the solar panel for a full day to optimize performance. To charge the solar panel, place the solar panel in direct sunlight with the unit in the "ON" position. The surface of the solar panel must be kept clear, if not, this will influence the efficiency of charging.

1.2 600mAh Ni-MH Battery	
PANEL	
2v 100mAh	
LIGHT APPEARANCE	
WHITE	

PACKAGE INCLUDES:

Solar Pathway Lights

Triangle Ground Stakes

BEFORE INITIAL USE:

Place the solar panel in direct sunlight to charge for 6-8 hours in order to sustain maximum performance.

CHOOSING THE RIGHT LOCATION:

Ensure that the solar panel is located in an outdoor area where it can receive at least 6 hours of sunshine each day. Shady locations will influence the battery's charge and may shorten the working time of the light at night time.

The solar panel should not be placed near other light sources, such as street lights, as this may affect the sensor inside the solar panel.

This solar light is ideal for night time lighting of the garden, lawn, patio, walkways or wherever needed. You can also charge the light

HOW TO USE THE SOLAR LIGHT:

1. Assemble the triangle ground stakes by aligning each of the open slots and push securely together so they lock into place.

2. Insert the assembled triangle ground stake into the four holes located on the rear side of the solar panel.

3. Toggle the "ON/OFF" switch on the back of the solar panel to the "ON" position.

4. Securely stake your light into the ground in the best direction to receive maximum sunlight.

If the light does not turn on automatically after an 8-hour charge please check the following:

1. Check that the light is placed in a sunny location and that the solar panel is facing the sun.

2. Check that the switch is in the "ON" position.

DISPOSAL AND RECYCLING OF BATTERIES:

To protect the environment, batteries must not be thrown in the domestic garbage, nor disposed of in a fire as they contain dangerous materials.

Dispose of the batteries by taking them to your local waste collection service to be recycled.
