

Set the user password

To set the new user password, the door must be opened first, then press the setting button to enter the password setting state (located on the inner left side of the door when its opened). When the screen displays shows "-----", enter 1-8 digits password, press "#" to confirm. If the screen displays "Into", it indicates that the password is successfully set, then system enters the standby state.

Set the administrator password

To set the new administrator password, the door must be opened first, then press the "#" key to wake up the panel, press the "0" key twice, and then press the setting key to enter the administrator password resetting state. The screen displays "-----", enter 1-8 digits password, press "#" to confirm. If "Into" is displayed on the screen, the administrator password is successfully set, and then system enters the standby state.

Three ways to open the door

<p>Method 1 Password opening</p>  <p>when you pull out the master key at horizontal angle, password only can open the door.</p>	<p>Method 2 Master key + password opening</p>  <p>when you pull out the master key at vertical angle, you can open with master key + password.</p>	<p>Method 3 Emergency opening</p>  <p>Master key+emergency key can open the door.</p>

Review Door Opening Record

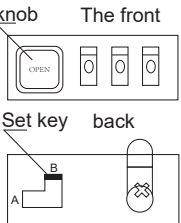

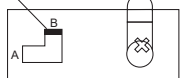

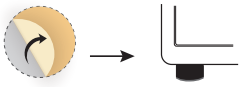

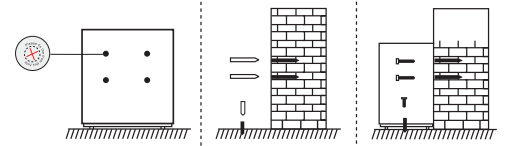

1. First, using your password to open the door, while the screen display "OPEN", press "0" and "8" button, then you can query the door opening record.
2. The record displays in three parts: Password type(such as PASS-1 user password/-PASS-2 administration password), number of opening door times(such as NO.01-NO.45), Door opening time and date. If you don't press the button in 5 second after your query, the screen will back to normal. The LCD screen can store 45 door opening records.

System Date Resetting

- (1) In the standby state, press "▲" to enter system date resetting. The corresponding parameter will blink.
- (2) Enter the corresponding number to adjust the date and time, and return to the standby state after the adjustment.
- (3) During the setting, press the "▲" key to go back one space and re-enter.
- (4) During the setting state, if no key is pressed within 10S, the state will be exited (the modified value is invalid). System will return to standby.

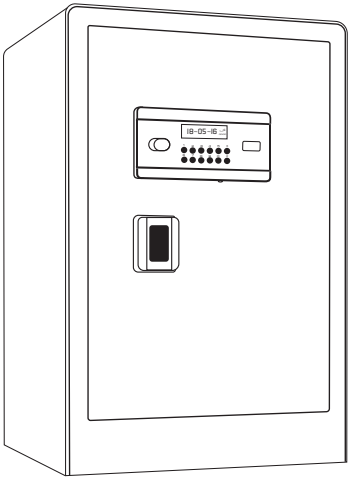

Dual Alarm System

- ① After 3 consecutive time of wrong code, your safe will activate the alarm system, the alarm will sound, then enter the correct password and the alarm will be cancelled.
 - ② In the standby state press "0", the screen displays "Bell on" and enters the alarm state. In the alarm status, the safe will alarm if encounters vibration or violent hit)
- ! Note:** When the door is opened, the alarm is turned off and needs to be turned on again.
