

With a strong commitment to recycling, over 6.5 million pounds of cardboard, foam, and plastic are given a second life each year.

All innersprings are made from 95% recycled steel and all foams are Certi-Pur US[®] Certified

Water refill stations have been installed in all facilities nationwide to reduce bottled water waste (and keep the team refreshed of course!)

Our Zero Waste Initiative has led to a 21% reduction in scrapped foam by better utilization of foam buns and reduced quilt transitions

Multiple facilities have undergone a transition to energy-efficient lighting with plans to convert all remaining facilities by the end of 2024

100% of crates and pallets are reused until recycled as part of a vendor exchange program
