

For Electric Stove:

CFM of range hood over an electric stove depends on the width of the stove

Width of your stove  $\times 10 =$ Appropriate CFM for range hood

For Gas Stove:

CFM of range hood over a gas stove depends on the total BTU of the stove

$\underbrace{\text{Number of burners} \times \text{BTU output of each}}_{\text{Total BTU for your stove}} / 100 =$ Appropriate CFM for range hood
