Backsplash Included: Yes

Basin sink Included: Yes

Sidesplash Included: No

Installation Required: Yes

Top Material: Engineered Cultured Marble

Maintenance:

1. Daily cleaning is required to keep the countertop dry, because the water contains bleaching agents and scale, the longer it stays on the countertop, the easier it is to produce water stains that are difficult to remove. Wipe with ordinary sponge and neutral detergent.

2. Artificial marble is a synthetic non-porous stone with strong anti-pollution ability, not resistant to acid and alkali, strong chemicals such as: paint remover, metal cleaner, strong acid cleaner, etc. will produce irreversible traces. Wash surfaces immediately with plenty of soap and water.

3. Artificial marble has poor conductivity, and high temperature will cause damage to the stone. It is recommended to put a thermal insulation pad on the countertop for daily use.

4. The artificial marble that has been cleaned for a long time will also lose its luster. It is recommended to use furniture wax to improve the brightness, or use sandpaper to polish the surface of the artificial stone. As long as it is cleaned regularly and waxed regularly, the luster of the artificial stone can be maintained
