

Installation Instructions

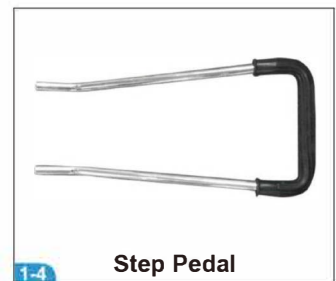

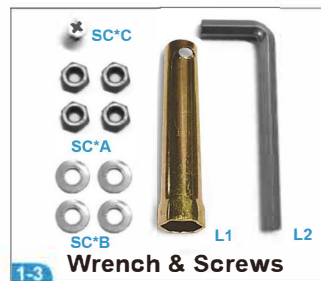

1. Parts Included

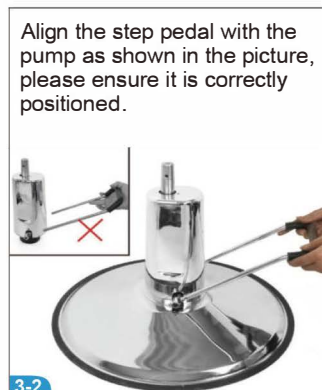

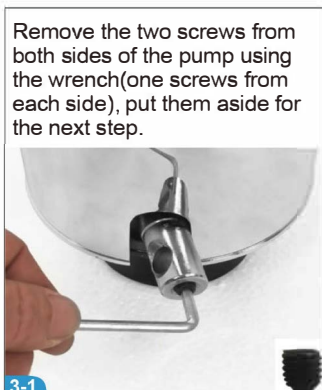

2. Installation Instruction

Please note: the top seat could be heavy, 2 people are recommended for the installation

Step 1. Attach the Step Pedal to the Pump

1. Parts you will need for this step.

Installation Instructions

3. Installation Instructions

Step 1. Install the footrest

Remove the 3 screws & washers from the black panel at the back of the seat(as shown in the picture), please keep them for the next step.

1-1

Align the footrest with the holes(where you have just unscrewed the screws in the last step), and secure them together using the allen wrench and the screws(that were removed from the last step).

1-2

Step 2. Install the top seat

Align the hole on the black panel at the bottom of the top seat with the base and pump.

1-1

Insert the top seat onto the base and pump to secure the top seat(nothing else needs to be done, the top seat will be secured when it is properly inserted onto the base and pump).

1-2

Step 3: Install the back support

Remove the 3 screws from the back support(as shown in the picture).

1-1

Align the screw holes of the back support and first insert the 3 screws removed from the previous step. Please do not tighten the screws completely yet, so there has some room to adjust the back support to the correct position, and then tighten the screws using the wrench.

1-2

Installation Completed

1-3

*Tips for height adjustment

To Lower the Seat: step on the step pedal all the way down to lower the seat.

To Raise the Seat: consecutively step on the step pedal halfway to slowly raise the seat to a higher position.
