Tip: Use screws to pass through the oval holes on the upper and lower hinges and fix the door panel to the cabinet (do not fully tighten the screws). Adjust the height of the door panel up and down to the appropriate position and then tighten them. After all doors were installed and adjusted to the same height, lock in the remaining screws one by one.

Ex16

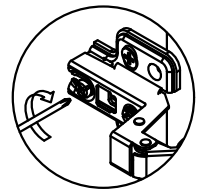

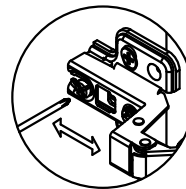

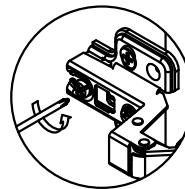

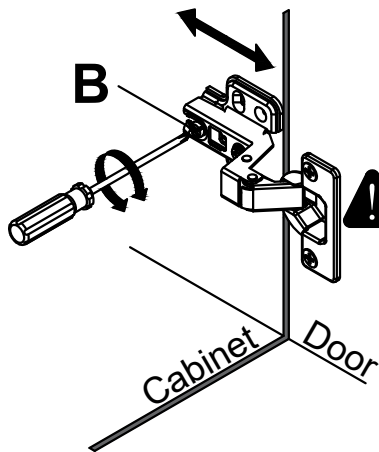

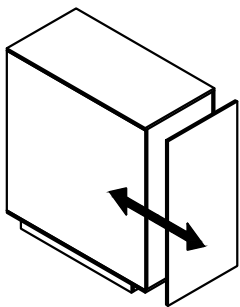

YOU WILL USE HINGE ADJUSTMENT INSTRUCTION ON THIS PAGE FOR THE NEXT STEP.

If you find a large gap above or below the door.

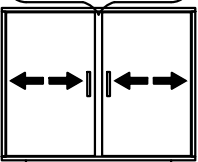

To adjust the vertical height. Loosen the four screws "A" on both hinges. Two of them are usually in slotted holes which allows you to adjust up or down by a few mm. Then tighten back up.

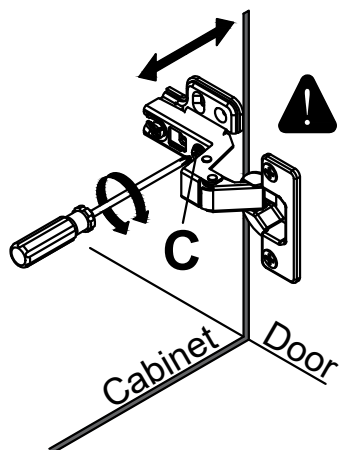

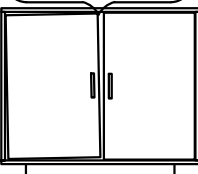

If you find the door is too protruding or too inside.

To adjust depth. Loosen screw "B" on both hinges and move the door to suit. If the door doesn't move, turn screw "C" on both hinges 1-2 turns and try again. Finally, tighten both screw "B" and reset both screw "C".

Have gap

Have gap

If you find a large gap between or beside the doors. Don't worry, it's not the problem with product.

To adjust side ways. Turn screw "C" clockwise or counterclockwise on both hinges until the door is in the desired position.
