American Plant EXCHANGE

Dish Garden Care Guide

Light

Dish gardens require indirect sunlight. They will do well 6-8 ft away from windows. Most of the time, ceramic dish garden will have an assortment of plants with similar light requirements.

Water & Humidity

Since there are multiple different plant species in your pot, you have to keep an eye on your plants after wateing. In a beginning, we suggest watering twice per week and from there decrease or increase the watering schedule as needed.

Temperature

Prefers temperatures between 65-85°F.

Food

No need to fertilize your dish garden.

Toxicity

There will be a mix of toxic and non toxic plants in the container.

Growers Tips

Ceramic dish garden kept as a single decorative unit require regular trimming. What this means is: look for dead leaves and cut them off. If any of the plants starts to overgrow others, trim it down a little.
