

USER GUIDE

1. The bottom of the squirrel has three screw holes. Use the included accessories (screws and iron plates) as shown to install them. The hole on the other side of the iron plate can be used with a ground nail or screw (this product does not include this accessory) to fix the squirrel to the ground.

1. As shown in the left picture, align and connect the notch and the protrusion. Then, by tightening the nut inside the circle in the right picture, it can be done.

2. After adjusting the solar panel support to the appropriate angle, tighten the screws on both sides.

Note:
