Geometric Progression 3

D1214S24269-2261

Geometric Motion III is part of a series of eight geometric drawings that invite the viewer to experience the elegance of minimalist design. These understated compositions showcase line drawing techniques that explore a variety of geometric shapes that highlight the fundamental importance of the line in art.

In Geometric Motion 3, overlapping complex shapes feature distinct line weights and shading techniques that result in a visually striking composition that celebrates the beauty and complexity of geometry. The series is reminiscent of Josef Alber's geometric line drawings of the 1950s. Part of ART by TA, Geometric Motion 3 is an exclusive and original work of art.
