

Wall Decal Application and Removal Instructions

Application

1 Select a smooth, clean surface to display your decals. We recommend smooth, clean surfaces. Remove the print from its packaging and let stand 30-45 minutes at room temperature. If the area has been recently painted or wallpapered, allow the surface to dry for at least 30 days prior to installation.

2 Clean the selected area with warm water only to ensure that no dirt or residue will adhere to the adhesive backing of your decals. ***DO NOT USE SOAP OR ANY HOUSEHOLD CLEANING PRODUCT.*** Allow the surface to dry approximately 30 minutes to make certain the area is completely free of moisture.

3 Once your application area is prepared, simply peel the print from its backing. Position each decal and smooth onto the surface applying pressure starting from the center to the outer edges. If you encounter any air pockets, simply lift the decal from the closest corner and reapply.

4 Roll and store the backing for future use in the event you decide to remove and store the decals for later application.

Removal

1 Slowly peel the print off the surface and reapply to another area or place onto the backing for storage.
