

**Note 1: Solution for inability to hang: (for railings with a width of about 12 centimeters)**

**The S-hook has toughness and can be stretched appropriately.**

**The ends of the hooks can then be reinforced with cable ties.**

**Note 2: Solution for insufficient height hanging: (For railings with a height of about 1 meter)**

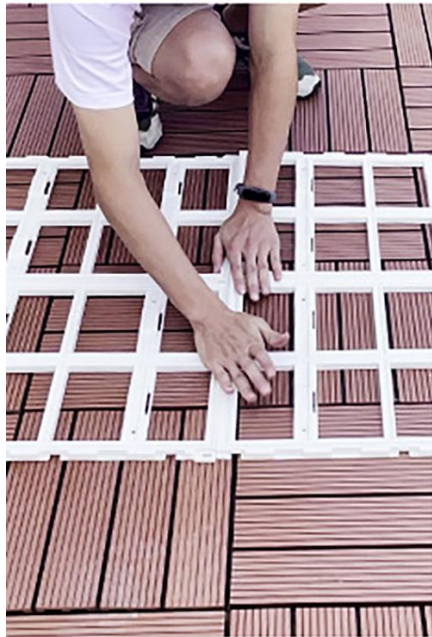

**Hook the S hook as shown in the diagram**

**This way, it can be hung onto a one meter high balcony**

# Railing installation method

**1. Splicing pendant**

**2. Hook the pendant onto the railing**

**3. Hang the flowerpot up the railing**

# Wall mounted installation method

**1. Drill holes and place expansion pipes**

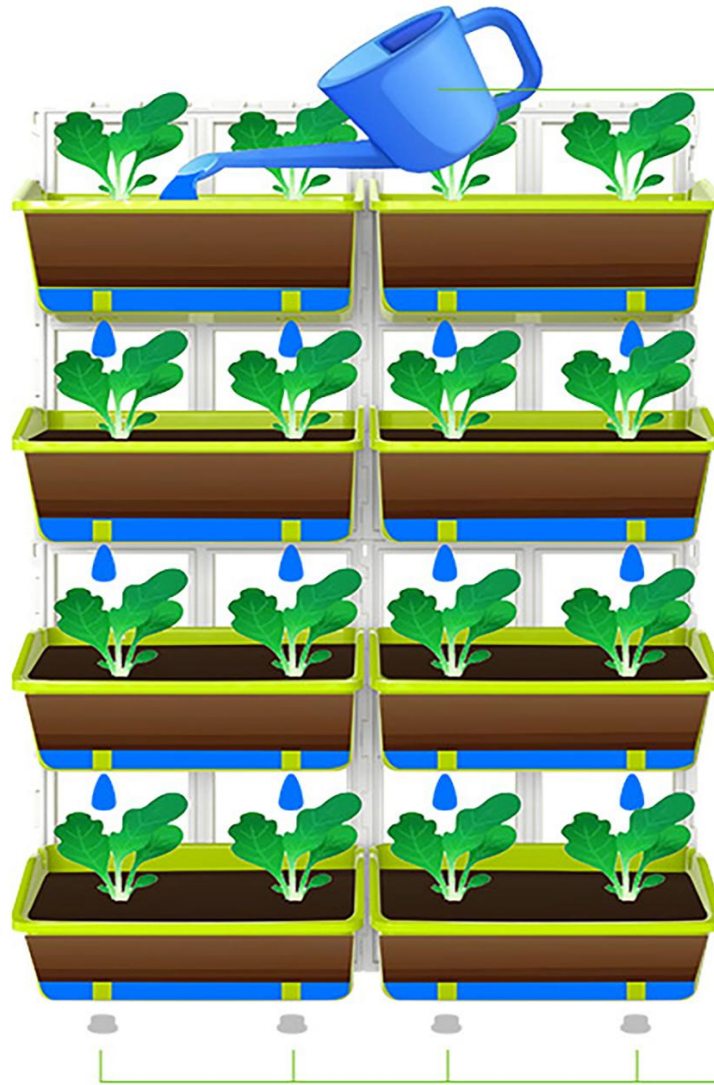

**2. Fix the pendant with screws**

**3. Hang the flowerpot up**

# Instructions for rubber stopper

When watering, simply irrigate from the top, and each layer of water will automatically flow down when it is full.

Plug the bottom pot with a rubber stopper to prevent water from running onto the floor.
