

# SAFETY GATE

## Instruction Manual

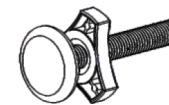

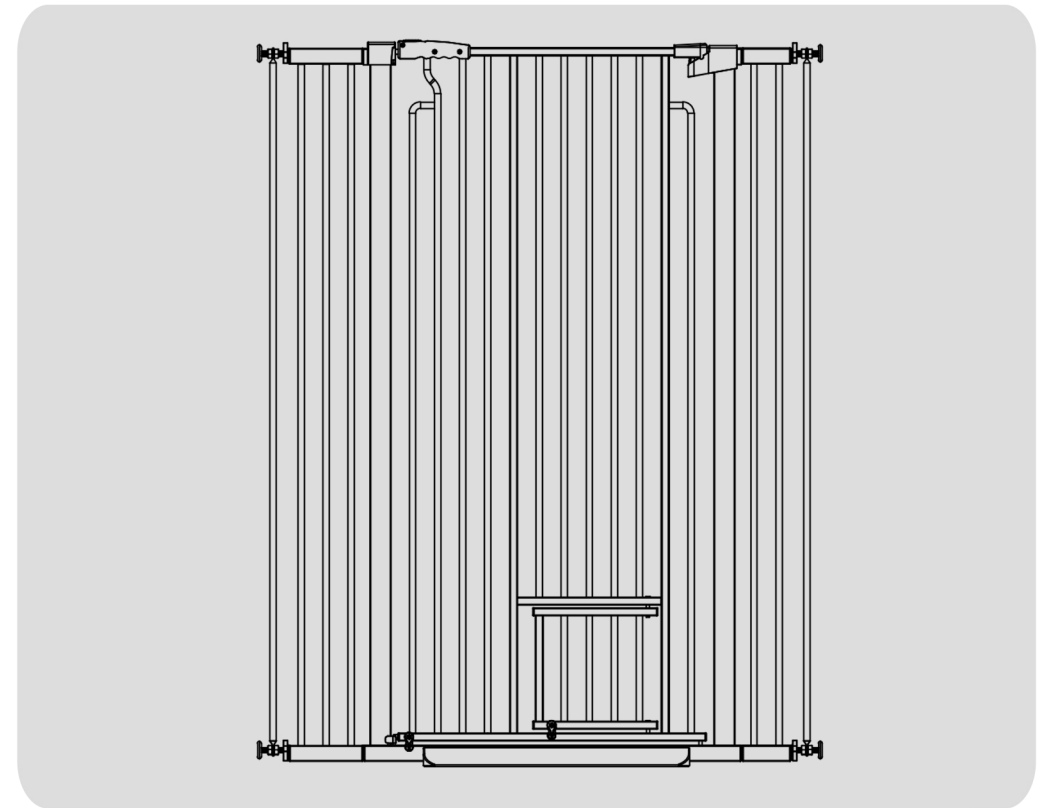

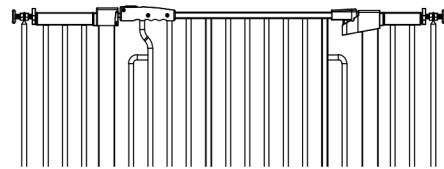

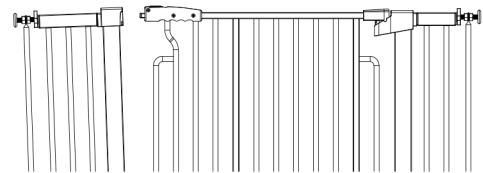

# Do Not

## Cut off the belt before installation!

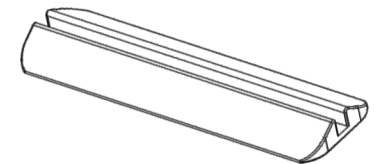

The gap between the door latch and the frame is not a defect!  
Before installation , the door frame will appear bent.  
It will be fixed and the gap will disappear after proper installation

Before Installation

After Installation

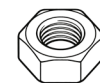

Tension Bolt X4

Anti-stumble Pedal X1

Anti-stumble Pedal X4

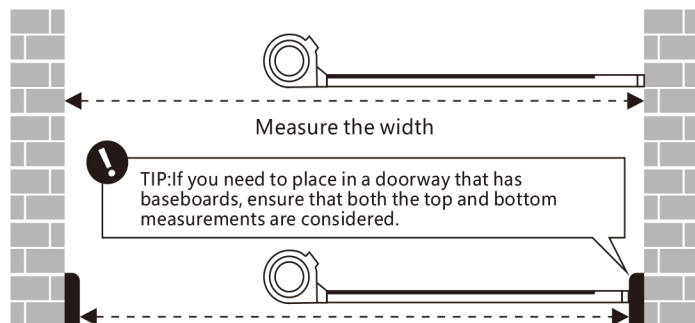

Nuts X8

If you cut it off, you can still install it normally, but it will require a lot of effort. If you want to install it easily, you can use additional belts to tie it up in order to reduce the gap , and then continue with the installation.

**Note: The belt is to prevent the gate from swinging back and forth to facilitate installation**

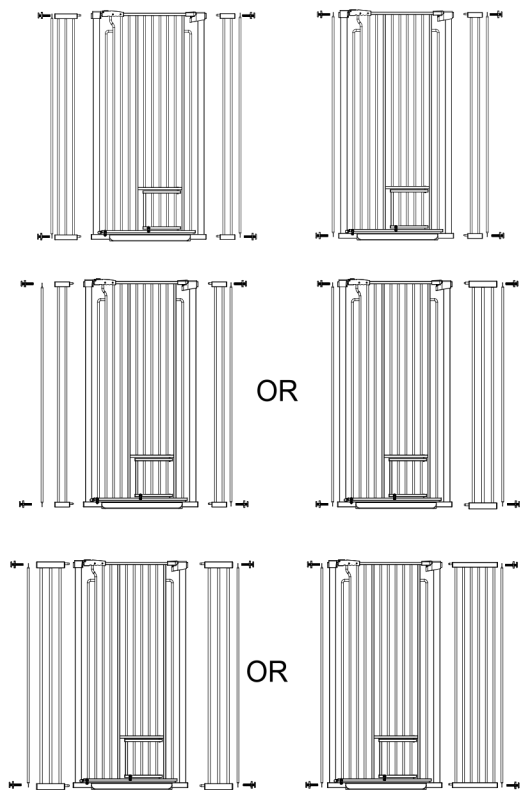

# ✂️ INSTALLATION METHOD

## STEP1 Measure the width

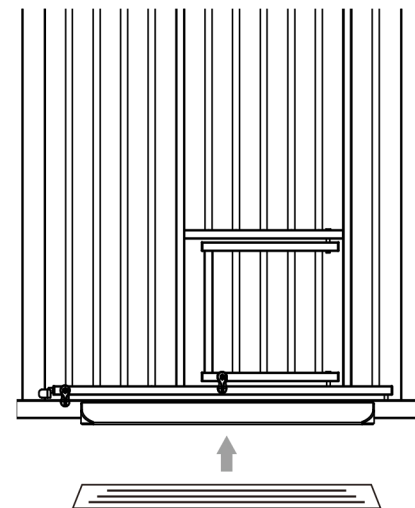

## STEP2 Find your size

According to the opening size you measured, select the extension you need.

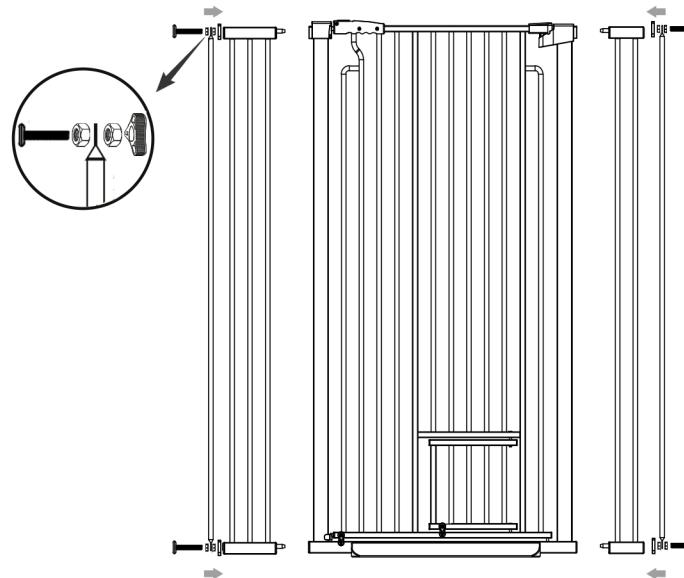

## STEP3 Put the anti-kick foot pedal buckle on the door bar.

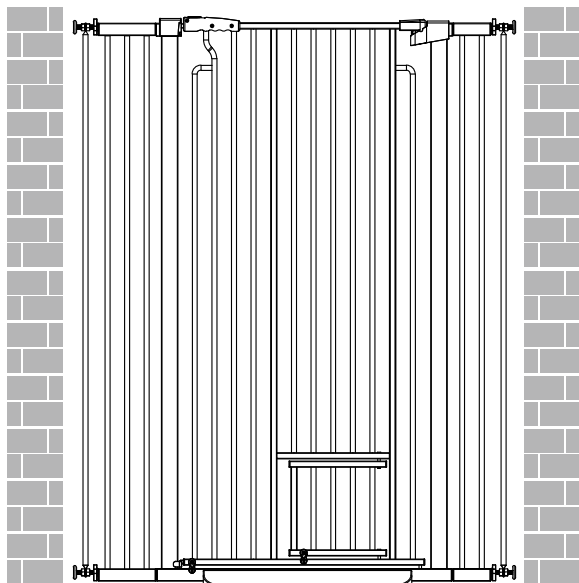

## STEP4 Insert metal bolts in the four corners of the door bars.

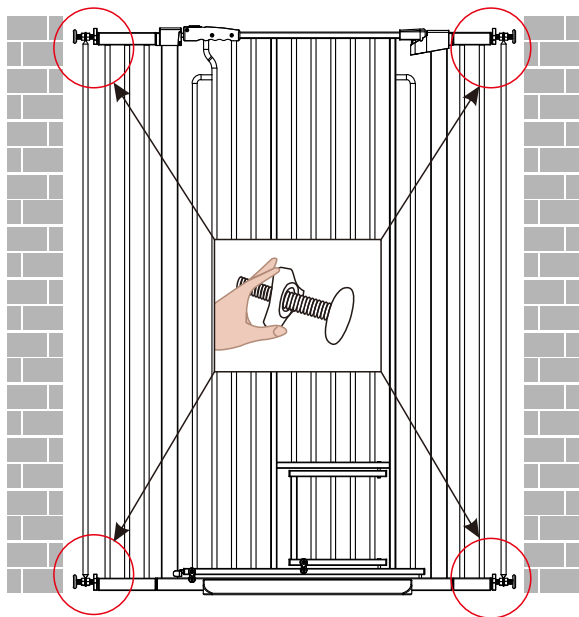

(When you need to use a single extension piece, you need to place two nuts on both sides of the independent extension piece. You can use it to adjust the distance between the two pipes to prevent your pet from slipping out through the gap.)

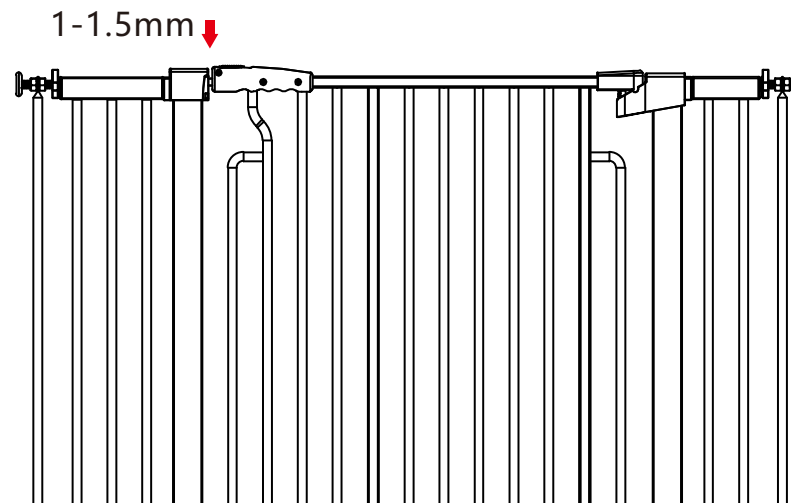

**STEP5** Place the door bars in the position to be installed.

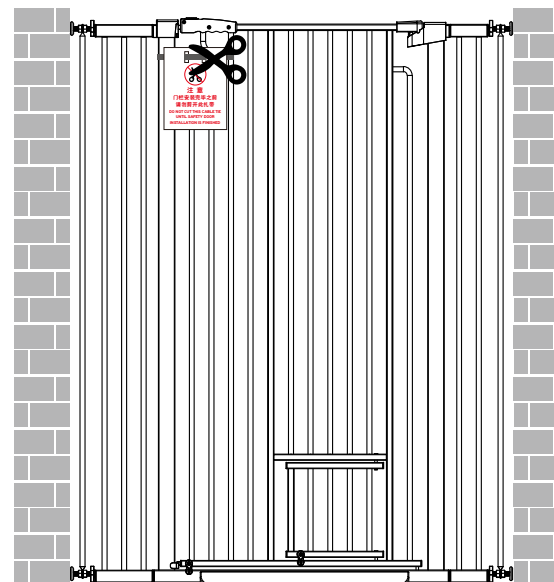

**STEP6** Rotate and tighten the bolts at the four corners of the door rail.

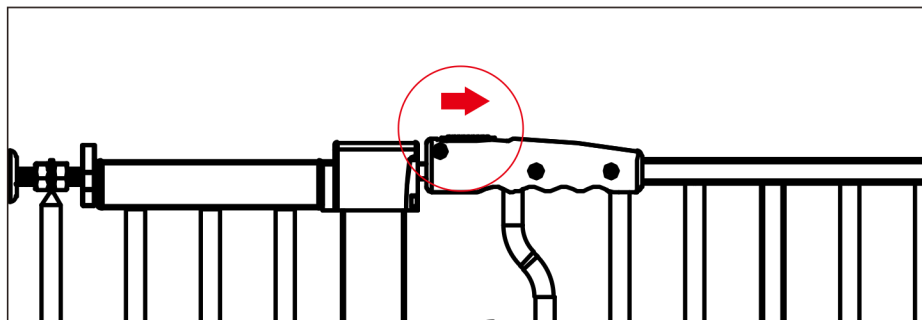

**STEP7** Check the middle distance between the lock head and the lockbox  
1-1.5mm or so can be.

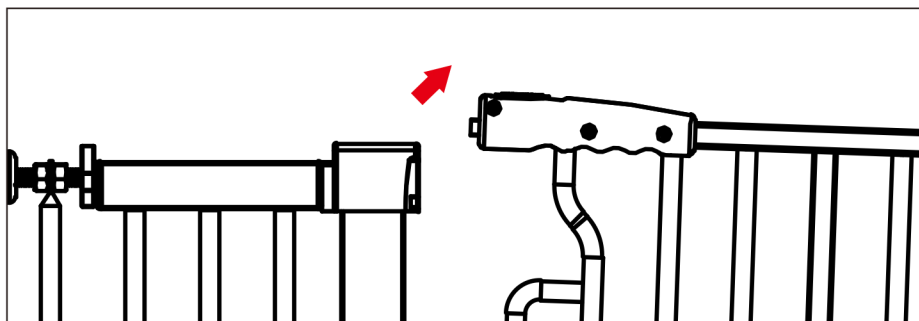

**STEP8** After the installation is completed, cut off the nylon tie and use it after the test installation is firm.

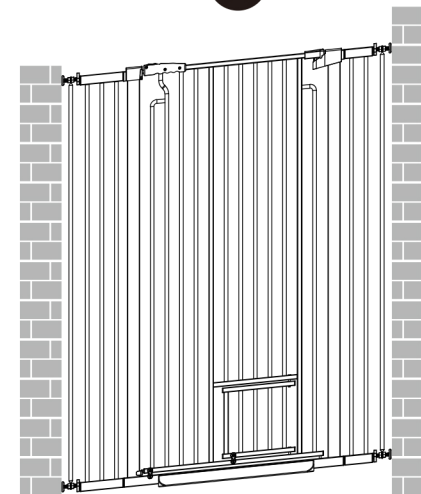

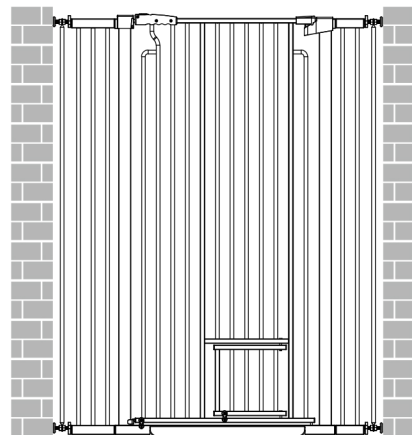

# ✂ OPERATION

1. Push switch back

2. Open the gate
