• SAFETY INSTRUCTIONS •

1. Please read the instructions carefully before use.
2. Make sure the wall can bear the weight of the mirror.
3. Do not use ropes or chains to hang the product.
4. Before starting the electrical installation, the main power supply must be disconnected.
5. All electrical products should be installed by a qualified National Electrical Code (NEC).
6. Before drilling, make sure there are no hidden electrical wires or pipes in the wall.
7. Keep your belongings away during the installation to avoid any damage.
8. Please note the following when modifying a wall switch: This switch only provides power and cannot control the lights; light switching, three-color illumination, and brightness adjustment can only be achieved via the touch switch button.
9. Check all screws and bolts for tightness every three months or as needed.

△ Please read the instruction manual carefully.

• Change the power supply connection •

If you lack professional wiring experience, please contact a licensed electrician to perform the work.

Change the power supply connection

Safety Warning

Use a voltage tester to check the actual wall wiring before connecting; reversing polarity creates a risk of electric shock or fire. If you lack professional wiring experience, please contact a licensed electrician to perform the work.

1. Turn off the main power switch before operation, and use a test pen to confirm there is no electricity before proceeding!
2. Use a voltage tester to test each wire, mark the live wire L, neutral wire N, and ground wire G (if it's a two-prong plug, there is no ground wire), connect the wires to the wall outlet, and tighten the screws to prevent the wires from loosening due to pulling.

If you lack professional wiring experience, please contact a licensed electrician to perform the work.
