

LORELEI CONSOLE TABLE ASSEMBLY

1. Assemble the base but only about half tightening the 4 bolts. Leave the adjustable feet fully screwed in for now.
2. Place the glass top on top of the base.
3. Push down a little on the glass while slowly working your way around each of the bolts tightening up gradually. Only give each a couple of turns and then move to the next. Repeat this all the way round and round again until they are all tight.
4. The table top should now be perfectly level with the top of the base.
5. To level the base to the floor, remove the glass top and use the adjustable feet if needed to level to the floor. Only do this in the place where it is actually going as all floors are a little different and it may need adjusting again if being moved to another area.
6. At this point the table should be perfectly level. If not try slightly loosening the bolts off, pushing the table to the floor then tightening the bolts again. It's about finding the balance between it being level to the glass top and the floor. The feet adjust quite a lot which should be more than enough to allow the table to sit level.
