Upper Bounce® Model List	7-8

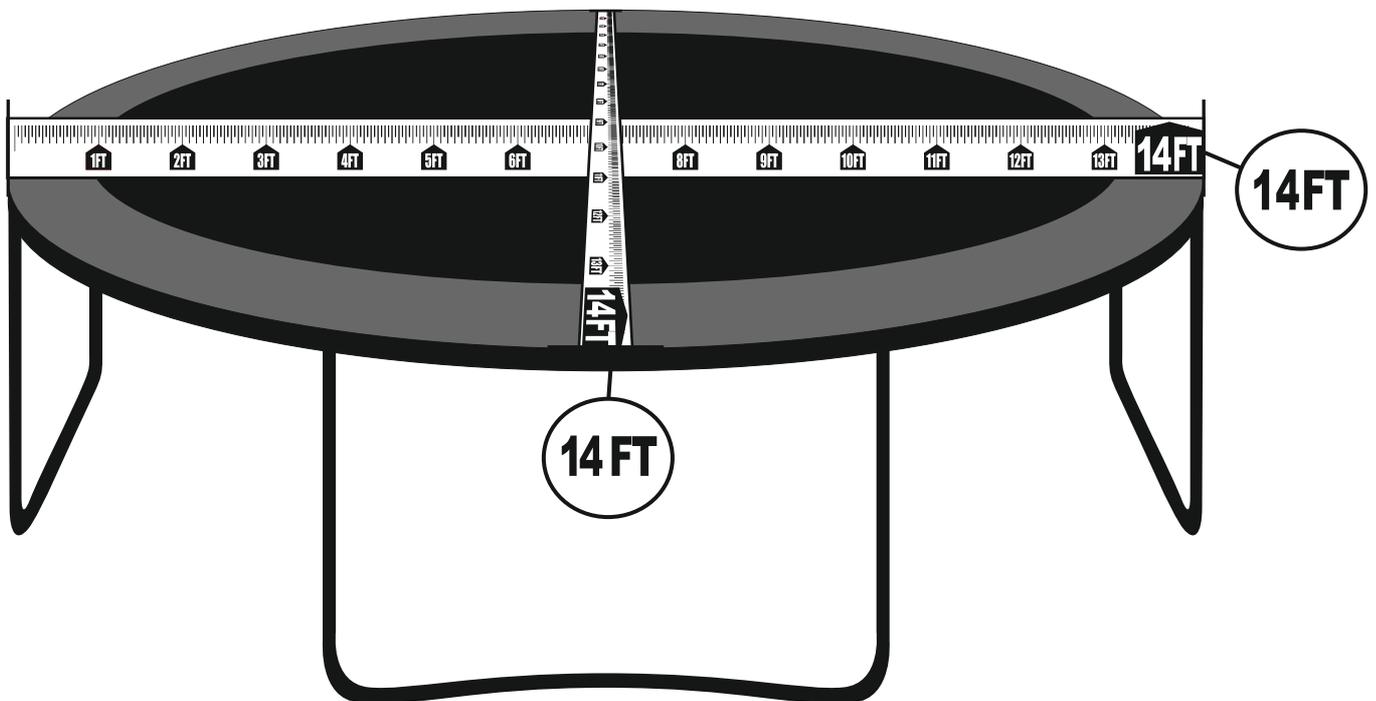

Thank you for choosing Upper Bounce® for your trampoline and trampoline replacement needs! When you select Upper Bounce®, you are choosing high quality trampolines, or replacement parts and accessories. At Upper Bounce® we think about "fun and safety" for the whole family!

Measuring Tips For Pad

The Upper Bounce® Safety Pad you purchased is designed to fit your Trampoline model if the specifications of the pad and your Trampoline are the same. Before starting the installation process you will want to make sure that the pad is the right size to fit your frame perfectly and only then go ahead with the assembly.

Measure the frame size to make sure you purchased the right Pad :

Measure your frame from one outside edge vertically and horizontally to the other outside edge so you get the correct measurements.

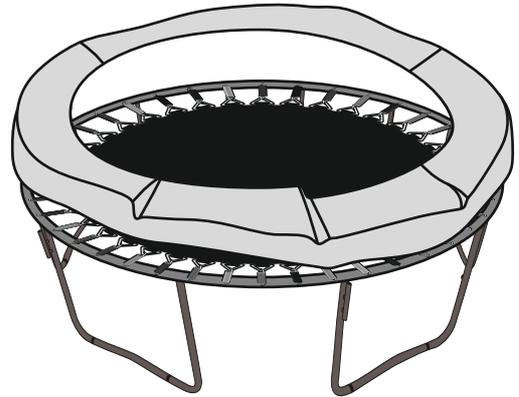

After you determine the size of your trampoline frame, Make sure that the model# of the item you purchased contains the digit of the frame size, see full Model list On page 7.

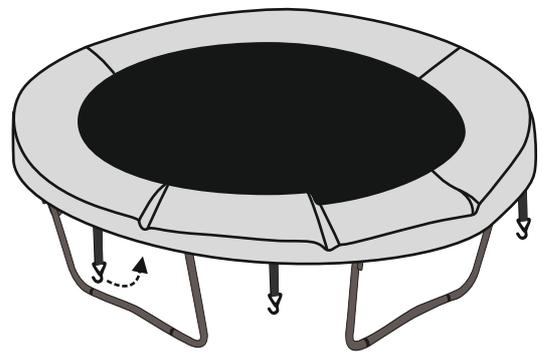

TRAMPOLINE PAD ASSEMBLY

Note: For **Oval** Shape Trampolines. see Page 5 for layout.

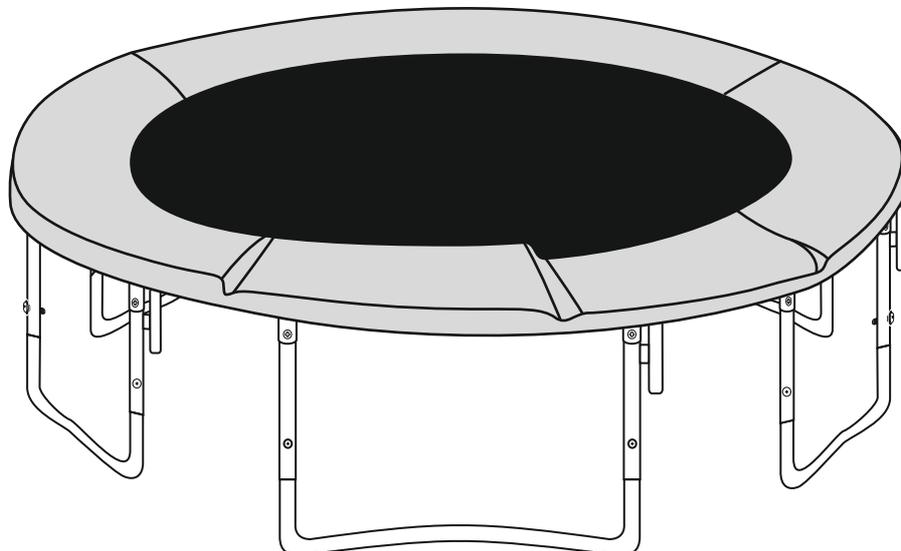

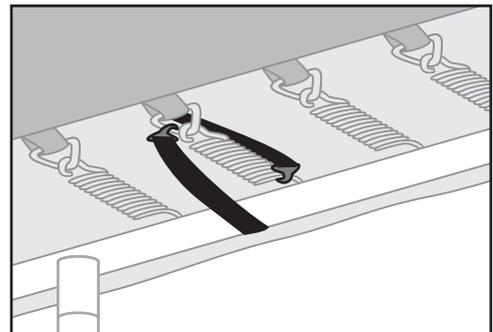

Step 1: Lay out the safety pad around the outer edge covering all the springs, as shown on right.

Step 2: The pad has double tie strings with an S shaped hook at the end.

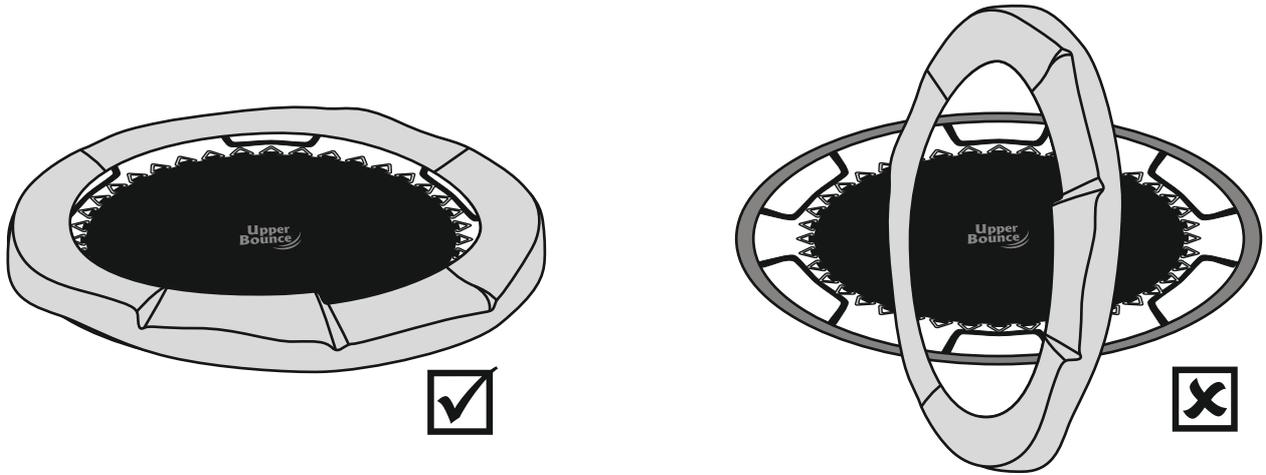

Step 3: Attach one S shaped hook to the springs of the mat, and the other S shaped hook to the V-rings of the mat. Attach the hooks from underneath the mat.

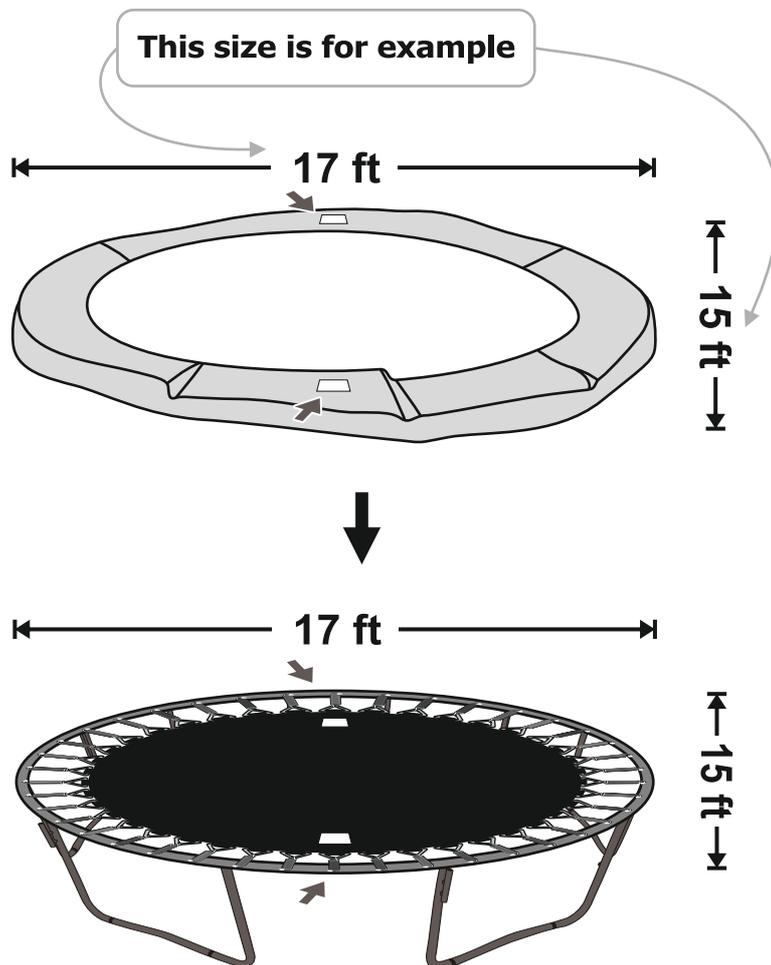

Pad layout for oval trampoline

Make sure to lay out the oval trampoline pad in the same direction as the oval frame.

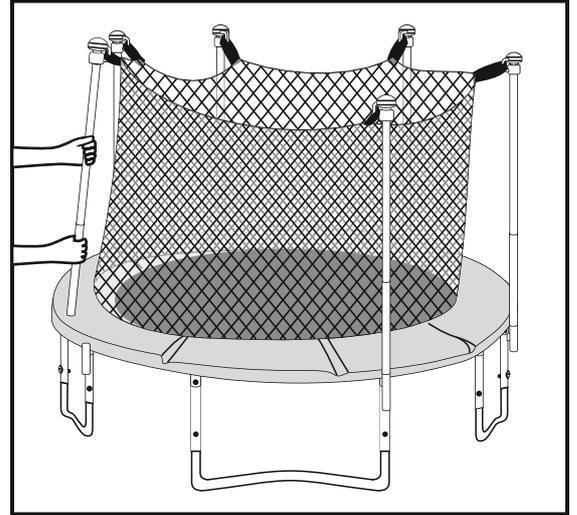

The information labels sewn onto the pad's 17 Ft. angle, are your indicators to organize the pad on the 17 Ft. side of frame.

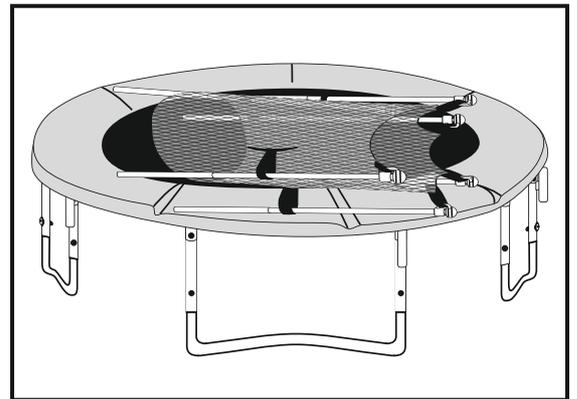

Weather Cover Instructions

Before you will use this Upper Bounce® weather cover you will need to remove the Enclosure Net and the Poles and lay it down on the trampoline then you can cover your trampoline with your Weather cover.

- 1) Remove the poles along with the net. Detach the bottom poles from the trampoline frame. (The upper poles and the net should not be removed.)

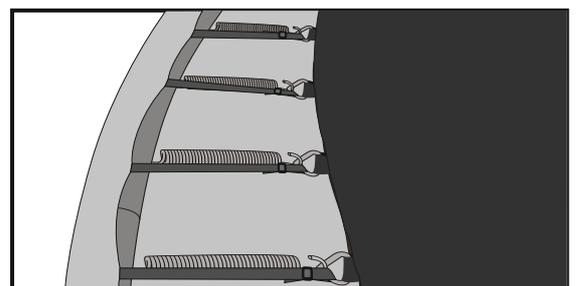

- 2) Once removed, Lay the poles with the attached net onto the mat of the trampoline.

- 3) You can now put the weather cover on top of the trampoline, pulling it over the trampoline frame. Make sure the drain hole is centered on the trampoline to allow for the most effective drainage of rainwater and snow.

- 4) Hook all the strings onto the V-rings of the mat with the S shape hooks. Attach the clips from underneath the frame.

REPLACEMENT PARTS LIST

If you need to replace any part of your trampoline, you can look for the Upper Bounce parts list below for each item model name :
