STEP 1: Safely unpackage the table top and place it upside down on a soft blanket or soft surface.

STEP 2: Cautiously take the table base and place it upside down on the bottom of the table top.

STEP 3: Using a measuring tape place the Table base in the center of the table top.

STEP 4: Slowly drill the screws provided into the table top connecting the top to the base.
Please do not over drill screws that may cause the holes to be stripped.

STEP 5: Carefully flip the table right side up by lifting from the top and not the base.

STEP 6: Please note the wood is strong enough to support the base with just wood screws. To be on the safe side please only move the table by lifting from the base when it's fully assembled and placed right side up
