INFLATABLE BOUNCER

INSTRUCTION MANUAL

AGE
3+

Product Type: Inflatable Bouncer with Splash Pool

Manufacturer: Guangzhou Vancen Co., Ltd

Made in China

Date Code: NT2404

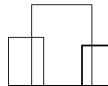

Safety Information

Adult setup, adult supervision and proper site selection are required at all times.

WARNING

- Use only in an open area free of obstructions and sharp objects.
- Never use near pools, stairs, roadways, driveways, slopes or other hazards.
- Place the product on a level, soft surface. Do not use on concrete, asphalt or other hard surfaces.
- Keep away from fire, heaters, hot surfaces and direct heat when exposed to sun.
- Do not use in rain, strong wind, near water hazards or during severe weather.
- Children must remove shoes, glasses, jewelry and sharp items before play.
- Do not allow flips, wrestling, pushing, rough play or climbing on the walls.
- Maximum total weight: 120 lb / 54 kg. Use by one child at a time unless otherwise specified by the product label.

PACKAGE CONTENTS

- Inflatable bouncer body
- Air pump
- Repair patches
- Instruction manual

BEFORE EACH USE

- Inspect seams, valves and the play surface for damage.
- Confirm all air valves are closed correctly before use.
- Make sure the area is clean, flat and free of debris.
- Stop using immediately if the product is damaged or losing air abnormally.

CARE & MAINTENANCE

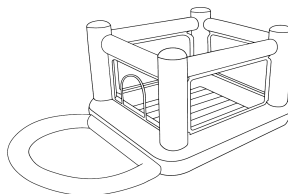

- To prevent damage, avoid contact with sharp objects, high-temperature items and corrosive substances.
- PVC material may become stiffer in low temperatures. Store at room temperature before use when possible.
- After use, wipe clean and open the drain/air valve to release air. Allow the product to dry completely before folding.
- Store in a cool, dry indoor area. Keep away from sunlight, moisture and rodents during long-term storage.

Operation Instructions

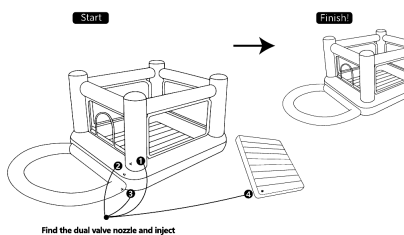

Set up, inflate, deflate and store the product as shown below.

1. SETUP

- Unfold the bouncer on a flat, soft surface with the splash pool facing outward.
- Check that the play area is clear on all sides.
- Locate the dual air valve/nozzle before connecting the air pump.

2. INFLATION

- Insert the pump nozzle into the air valve firmly.
- Inflate each chamber in sequence until the structure is fully shaped and stable.
- Do not over-inflate. Stop when the surface is firm but still slightly flexible.
- Close the valve cap securely after inflation.

3. DEFLATION, REPAIR & STORAGE

- Open the valve plug after use to release air. For faster deflation, use the pump deflation port if available.
- Drain any water from the splash pool and wipe the surface with a soft cloth.
- For small punctures, clean and dry the area, apply the repair patch and press firmly. Allow the patch to set before reuse.
- Fold loosely after the product is fully dry. Store indoors in a dry place.

Quick Check: If air loss seems abnormal, check valve caps first, then inspect seams and underside for damage.
