Floor Mirror Assembly Guide

Ⅰ. First, insert the three legs through the center ring, spread them outward, align the screw holes on each leg with the corresponding holes on the ring, then fasten them securely with the small screws.

Ⅱ. Once the screws on each leg are tightened securely, attach the caster wheels to the end of each leg. After confirming everything is stable, stand the leg base upright, align the mounting bracket on the upper mirror section with the post and insert it into position, then fasten each joint securely with screws.

Ⅲ. Fit the mirror into the frame until it sits flush. Locate the small holes at the top of the frame, pass a screw through the metal retaining clip and tighten it at each hole to secure the mirror in place.

The metal retaining clip remains adjustable after tightening. Fold the lower half of the clip over the back of the mirror to hold it firmly in place and prevent it from sliding.

Ⅳ.With two people, carefully lift the assembled mirror and frame and move it to the stand. Align the screw holes on both sides of the mirror with the stand brackets, then tighten the ball knobs to balance and secure the mirror. The tighter the knobs, the more firmly the mirror stays in place and the less likely it is to tilt. If you prefer the mirror to pivot more freely, simply loosen the knobs slightly.

Ⅴ.Your floor mirror is now fully assembled. A slight gap between the mirror glass and the frame is normal. If you prefer to minimize this gap, simply insert a foam shim between the back of the mirror and the frame.

Ⅵ.Important Notes

1.Recommended for two-person assembly to prevent the mirror from tipping and breaking.
2.After assembly,away from heat sources and children's play areas.
3.Clean with a soft dry cloth; do not use abrasive cleaners.
4.Periodically check that knobs and screws are tight; retighten as needed.
5.The mirror is fragile; do not apply heavy pressure
