| Tray Mesh Spacing | N/A | Available Packs | Pack of 1 Pack of 10 Pack of 16 |
| Total Tray Area | 2 sq. ft/tray | Tray Material | 304 Commercial Food-Grade Stainless Steel |

Cleaning Guide

It is important that your commercial food dehydrator and dehydrator trays are cleaned at the end of each drying session. This is done for many reasons:

- To ensure your food dehydrator and trays are kept in pristine condition
- To avoid cross-contamination of food
- To ensure the quality of your product is maintained
- To prevent food residue from building up and hardening on the trays

1. Clean the dehydrator and trays after each use. Ensure the machine has been turned off and the cool-down period has been completed.
2. Remove the racks from the dehydrator cabinet before cleaning.
3. Clean the dehydrator racks with warm, soapy water; rinse with clean water and dry immediately.

Racks are dishwasher-safe.
