

HANGING HARDWARE – MIRRORS, ART, & ALTERNATIVE WALL DÉCOR

- **Adjustable J-hooks:** These j-hooks are the strongest in the j-hook family of hanging hardware. The adjustable j-hooks prevent large & heavy wall hanging items from pulling the nails out of the wall, due to the adjustable/floating design of the j-hook. The top component (the part that nails into the wall) and the bottom component (the part that attaches to the item) are held together by two nuts on a threaded rod with both ends of the threaded rod crimped so the nuts cannot be loosened to a point of failure.

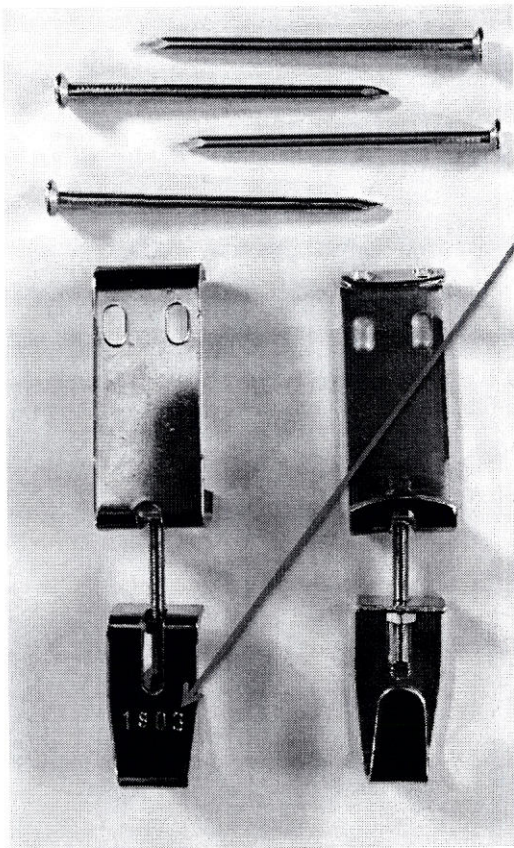

Figure 1: Standard adjustable j-hook pack. The number 1803 is the manufacturer's series number for production

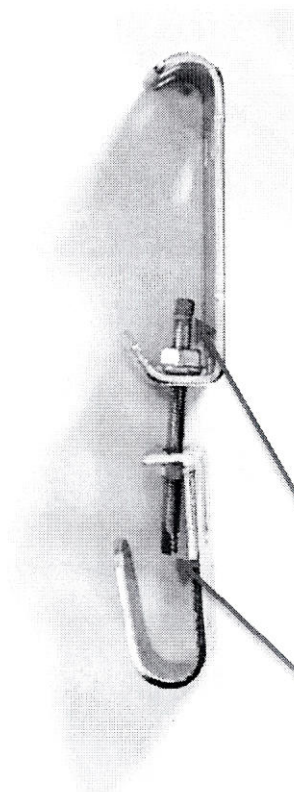

Figure 2: Adjustable J-hook side profile, showing the double crimped ends of the threaded rod.
