

Installation Manual

Notice

1. In order to ensure safety, installation, inspection and maintenance of the lamps, should be operated by professional electricians, or may damage the lamps, and even cause dangerous.
2. Must be used within the rated voltage range of the lamps.
3. Use only clean and soft dry cotton cloth to clean the fixture. Do not use any liquids for operation, as discoloration or damage to the fixtures may be caused.
4. Do not modify and replace the electronic components inside the lamp, otherwise the lamp may be damaged.

Name of spare parts & Bracket mounting

- A --- Expansion rubber stopper
B --- Self-tapping screw for brackets fixed to the wall
C --- Screw for lamp body fixed to the bracket
D --- Bracket that connects the wall to the lamp body

Fixture connection (Example)

1. Do not take apart the connected lines inside the fixtures.
2. The N and L of the fixture are connected to the neutral and live wires of the home lines.
3. The yellow-green wire is the ground wire of the fixture.
4. When installing, do not hang the lamp only by wires. Improper operation will break the internal electrical connection of the wires, causing the damage of the fixtures.
5. Make sure that all the wires are well connected, otherwise the fixture will work abnormally.
