

Note: When installing the net make sure that the Upper Bounce logo is placed on the outside of the trampoline.

STEP-1

SECURING THE TOP OF THE NET

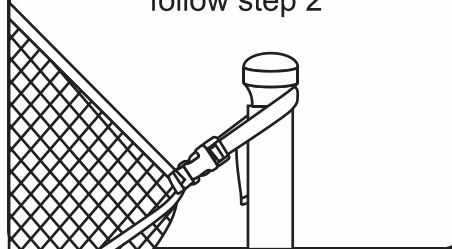

If you purchased a straight pole Enclosure Set use this step

If you have a "C" Type pole cap. Hook on all straps into "C" & follow step 2

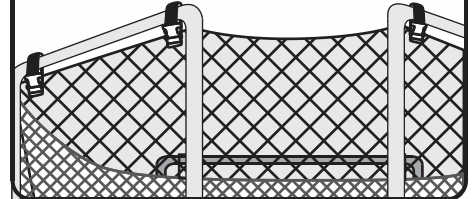

NOTE: If you purchased a ring on top enclosure set continue to page 12.

If you have a plain pole cap wrap all straps around cap & follow step 2

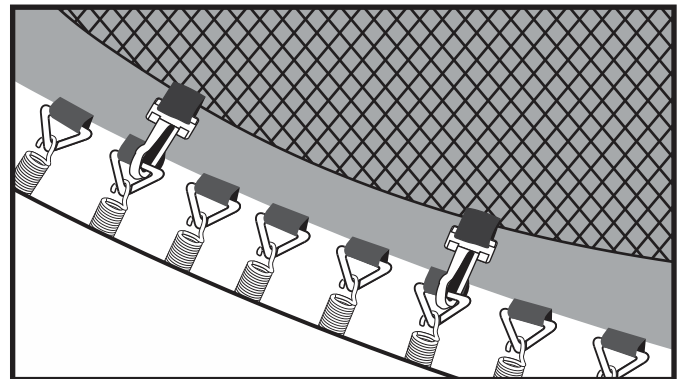

If Your Trampoline has Arches Connect the straps to arches and tighten according to your preferences.

STEP-2

SECURING THE BOTTOM OF THE NET

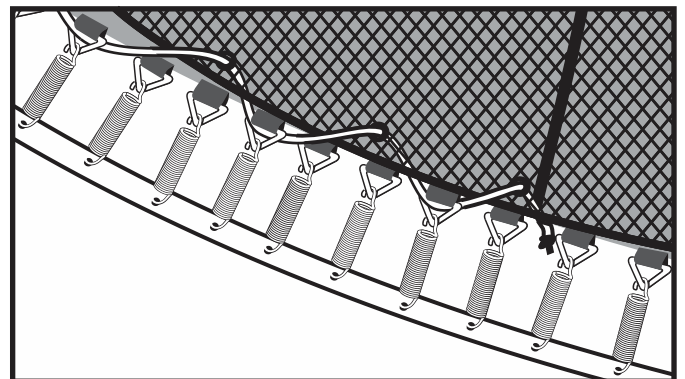

1. Connect the net to the V-rings of the trampoline mat using the attached clips, securing at regular intervals. This holds the net in place for you to complete the attachment with rope.

2. Secure one end of the rope by knotting it to the V-ring closest on one side to the trampoline entrance zipper.

3. Weave the rope through the net and every second v-ring successively, moving around the trampoline in the direction away from the entrance zipper.

4. When you complete the weaving and reach the other side of the entrance zipper, secure the other end of the rope also by knotting it to the V-ring closest to the entrance on that side.

Your trampoline safety net is now fully secured. Follow the safety checks in the 'Testing the Trampoline' section before using the trampoline net.
