INTRODUCTION

Thank you very much for choosing our product. Please read the instruction carefully before assembly and keep it for future reference. If you need further assistance on assembly, please contact our customer service through email.

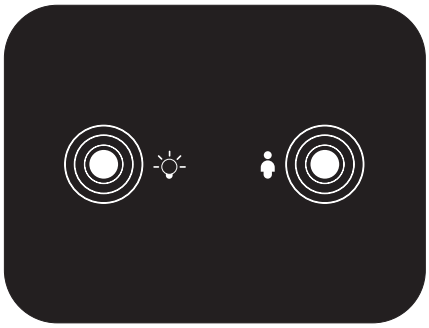

Tips

1. When installing the product, use a soft underlay (such as carpet or cardboard) to avoid scratching or damaging the surface of the product.
2. Don't tighten screws completely at first, just in case parts were assembled wrong and need disassemble. Tighten screws at last when all parts are put together.
3. The structure of this product can not meet the requirements of the placement of heavy items and children climbing

⚠ NOTE:

The door is made of tempered glass, which is stronger than ordinary glass, but there is still a risk of breaking. It is strongly recommended that during the installation process, a blanket should be placed under the glass to protect it from hitting the ground directly, especially the four corners of the glass hitting the ground, which may cause the glass to break.

X1 Smart Box

INSTRUCTIONS

This touch button can realize the functions of turning on and off the light strip, switching the light color, and dimming the light.

A. Each time you click this button, the three-color light switches, turns off the light (the indicator light goes out), and then turns the light back on (the indicator light turns on), and so on. Note that any single touch of this button will cause the radar sensing function to be turned off (the indicator light of the radar button goes out).

B. When any light is on, long press this button and the light will cycle between bright and dark until you release the touch. The brightness of the light will remain until the next long touch dimming.

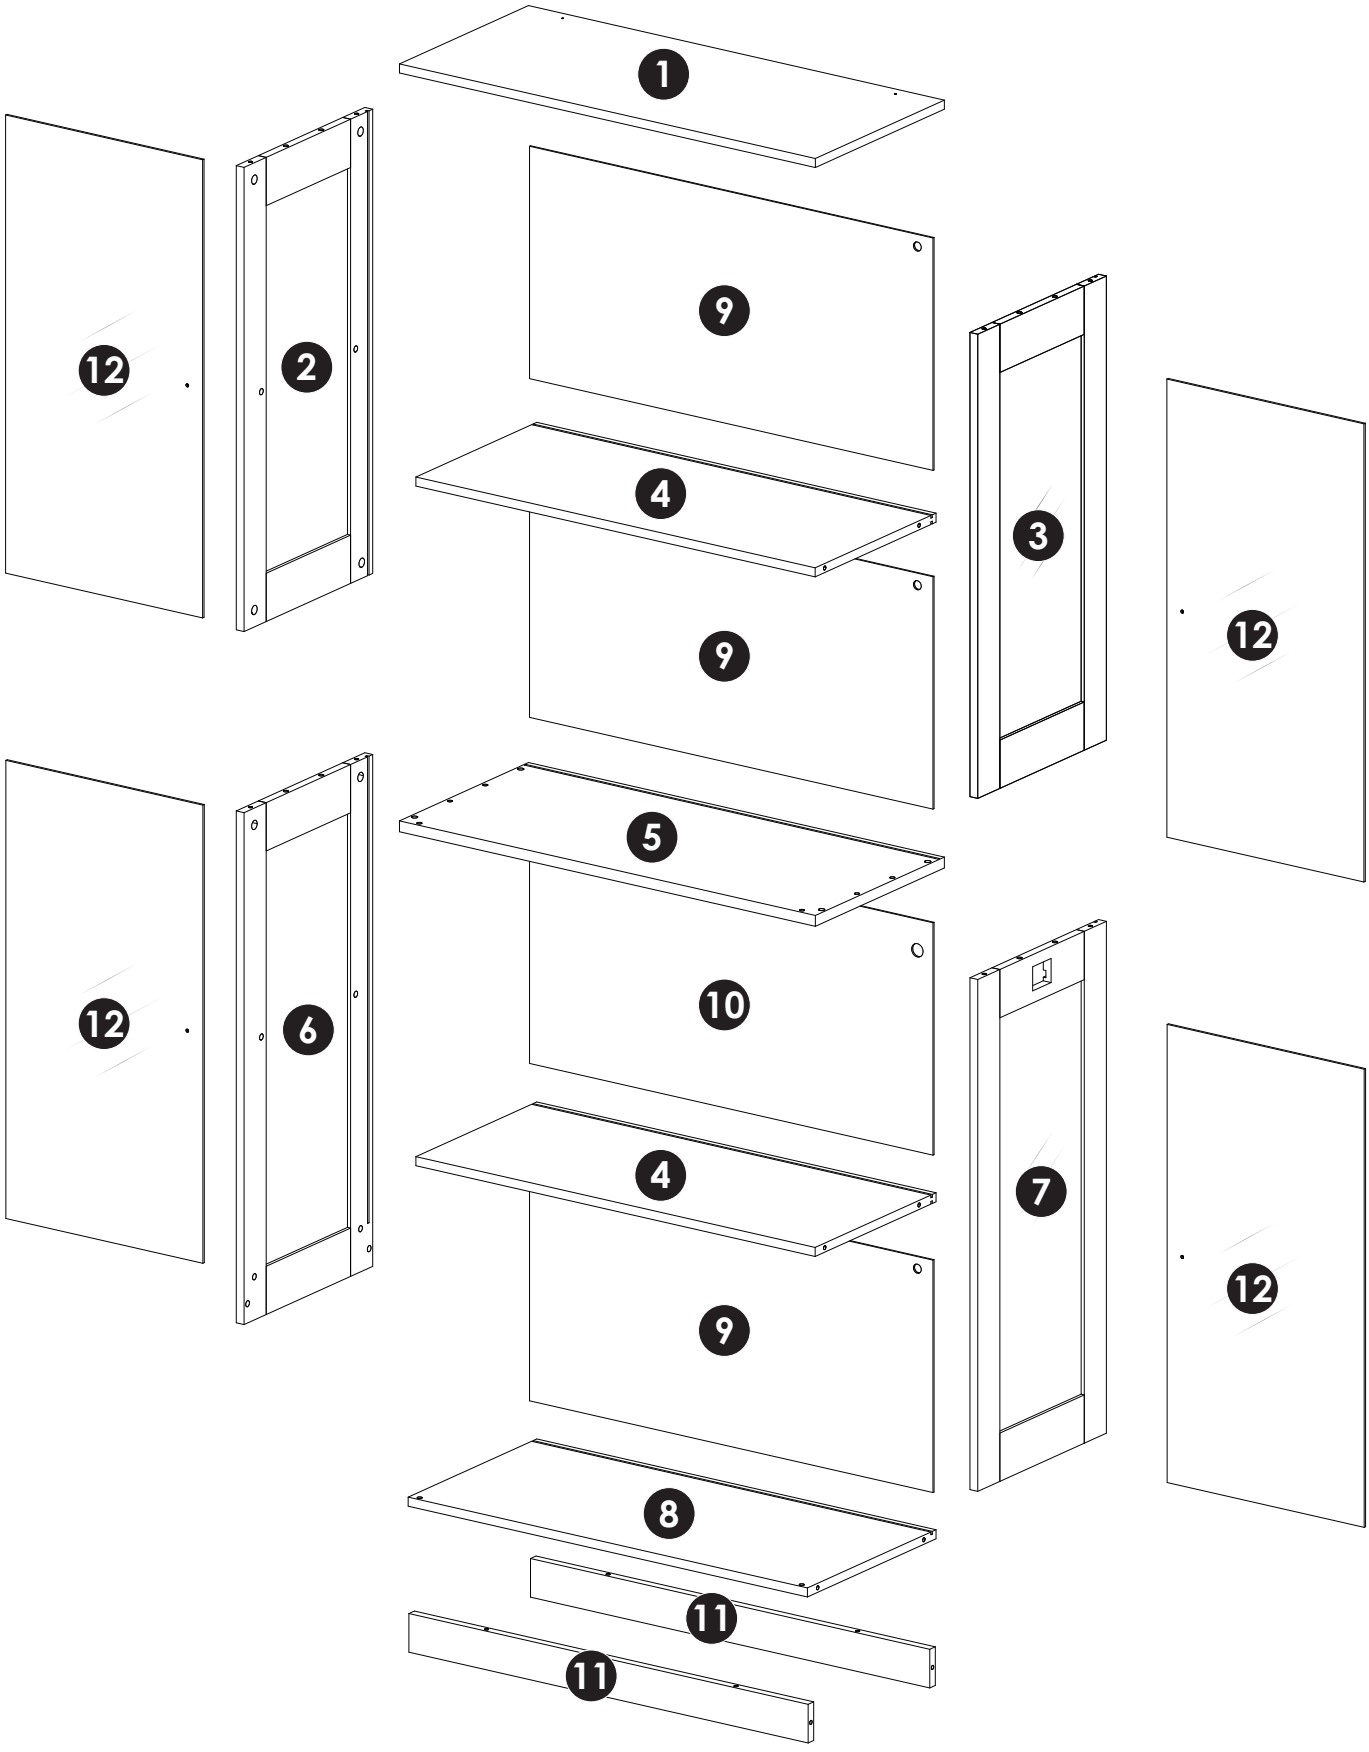

This touch button realizes the switch of radar sensing function

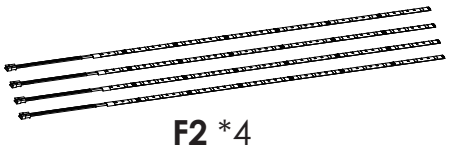

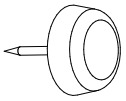

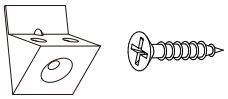

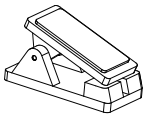

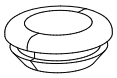

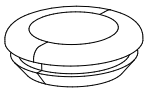

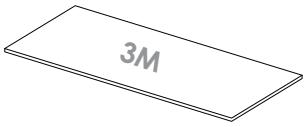

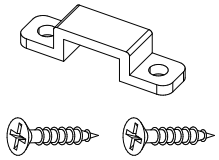

A. Click this button once to turn on the radar sensing function (the indicator light turns on). After a person leaves or remains still for more than 30 seconds, the light strip turns off; when the light strip turns off, people or objects within 1 meter move to turn on the light strip.

B. Press and hold this button for 1 second to turn off the human body sensing function (the indicator light goes out). At this time, the light strip remains in the state before being turned off and is no longer affected by the activities of people and objects.
