TURNING VENT COVERS INTO ART

How To Install Your Stellar Air Wall and ceiling Register (for wood or metal)

Remove your current
register.

Line up the Stellar Air vent and
predrill the holes if the holes
are not predrilled yet. Make sure
to use a small drill bit first,
before inserting the screw.

Once the holes have been
predrilled, grab the screws
and install them slowly. You
can counter sink if you would
like to have the screws flush.

Safety & Additional Instructions

It is important that all natural wood be treated with a wood oil to preserve the look and quality of the register. This should be treated like any other piece of wood furniture.

*All Stellar Air covers are made of unstained, unpainted natural wood. If you wish to paint or stain your register make sure to do so prior installation. To avoid warping, it should not be exposed to excessive moisture.

*Ensure that the opening is sized properly before installing. For information about measuring, please visit www.stellarairdecorativevents.com

*Stellar Air products are made of unfinished natural wood. Keep away from areas with open flames.

*Some Stellar Air products have designs with small openings. Keep small children away from covers.

*To clean your Stellar Air product, use a dry soft bristle brush or duster. You can use a bluish vacuum to remove any dust. Do not use water.

Thank you for Choosing us!! For instruction videos or more information about Stellar Air, please visit our website www.stellarairvents.com or call us at 843-795-6680 www.stellarairdecorativeeventcovers.com info@stellarairvents.com
