* **Note:** Specifications are for reference only.
Please refer to the product nameplate for accurate data.

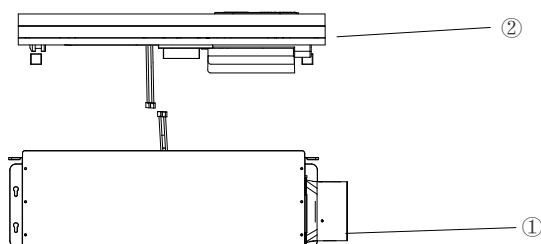

INSTALLATION

Notice

1. Please read these instructions carefully before installation.
2. Installation and wiring must be carried out by a qualified electrician.
3. Always turn off the power supply before installation to prevent electric shock.

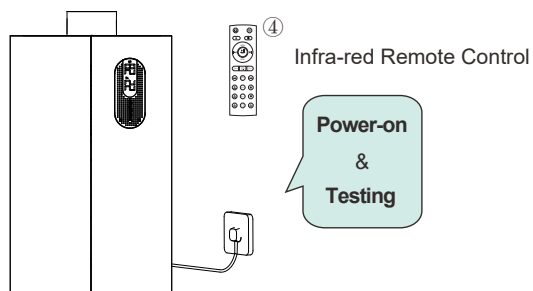

Step 1 Connect the Panel

Connect the front panel ② to the machine ①. The panel must be connected before performing functional tests.

Step 2 Power On and Remote Control Test

1. Turn on the power to test the machine.
2. After confirming the test is successful, disconnect the panel from the machine.

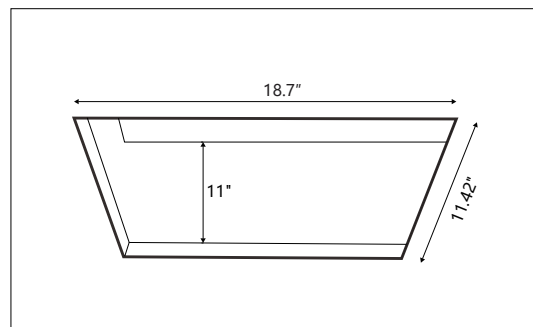

*** Note:** Infra-red remote control should be pointed directly at the device to ensure proper signal reception and reaction.
The panel must be removed after testing to allow the box to be installed on top.

INSTALLATION

Step 3 Prepare Ceiling Opening

Use appropriate tools to cut an opening measuring 18.7x11.42 inches at the desired installation location in the ceiling. (You can also use the size paper prepared for you to fix the position and make the opening.)

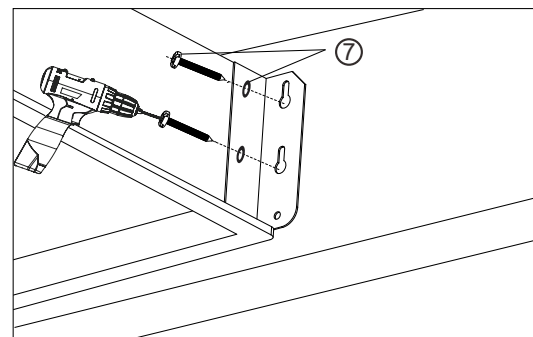

* Note:

Minimum 11-inch roof-to-ceiling clearance required for installation.

• Option 1 – Side Support Installation

(If you plan to install the bathroom fan on a single-side supported frame—such as in an attic or across ceiling beams—this method is suitable)

1. Ensure both side mounting brackets are correctly positioned and aligned with the support beam.
2. Use washers and screws ⑦ to securely fasten the machine to the beam. Maintain level alignment during installation to ensure proper operation and stability.

* Note:

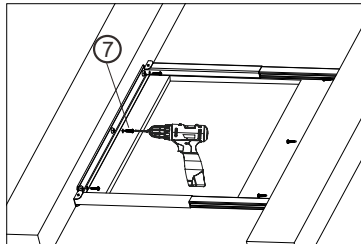

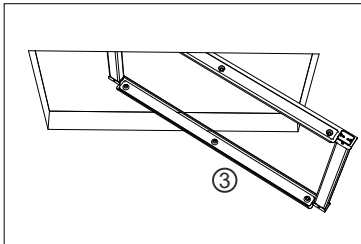

After securing the machine in place, proceed with the remaining steps by following the instructions starting from Step 5.

INSTALLATION

Option 2 – Top Entry Installation

Step 4 Installation Adapter Frame

- Insert the transition frame ③ into the ceiling opening above.
- Above the opening, expand the transition frame towards both ends (adjustable range: 14.2 in ~ 24 in).
- Once both ends of the transition frame touch the crossbeams, secure it to the beams using self-tapping screws and washers ⑦.

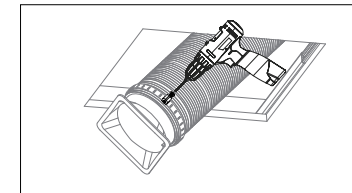

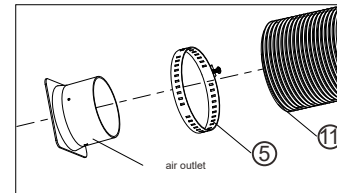

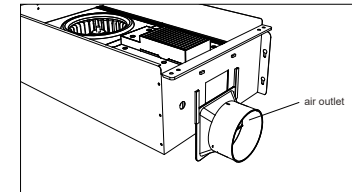

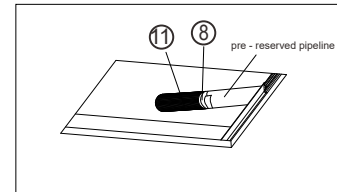

- * Note:**
1. The crossbeam must run parallel to the long side of the ceiling opening.
 - If the existing crossbeam is aligned with the short side, install additional wooden battens along the long side before securing the transition frame.
 2. If the maximum extension of the transition frame cannot span between crossbeams:
 - Prepare wooden battens of sufficient length.
 - First, fix them to the crossbeams.
 - Then attach the transition frame to the battens.

INSTALLATION

Step 5 Install Ventilation Pipe

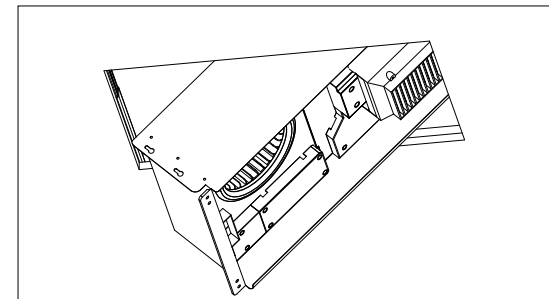

- Securely wrap and seal the ventilation pipe ⑪ to the pre-reserved pipeline connection with adhesive tape ⑧.
- Remove the air outlet grille from the main unit, and secure the grille to the other end of the ventilation pipe using a clamp ⑤.

(If additional reinforcement is needed, use zip ties or tape from the auxiliary installation accessories ⑧ for further fixation)

Step 6 Install Machine

Insert the machine into the ceiling opening above and connect it to the power supply.

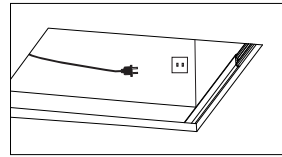

INSTALLATION

Connect to Power Supply

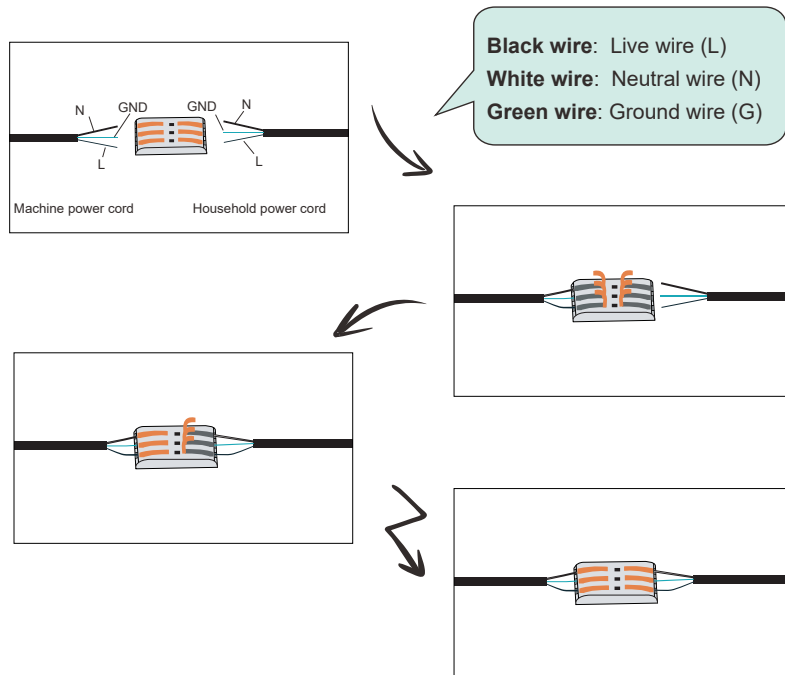

• Option 1- Direct Plug Connection

Plug the bathroom fan into a standard power outlet. If hardwiring is necessary, consult a licensed electrician.

• Option 2 - Wire Terminal Connection

1. If there is no pre-installed power outlet at the installation site, you may use the wiring terminals ⑨ to connect the power lines directly.
2. Wiring configurations may differ between households. The example shown here is for reference only. Please follow your actual wiring setup.

 Improper electrical connection may result in shock, fire, or equipment damage. Always ensure compliance with local electrical codes.

INSTALLATION

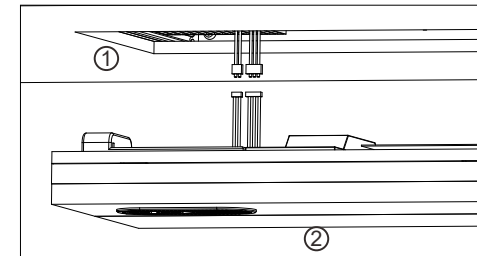

Step 7 Insert the Air Outlet into the Machine

Insert the air outlet into the machine, then adjust its position and place it over the transition frame.

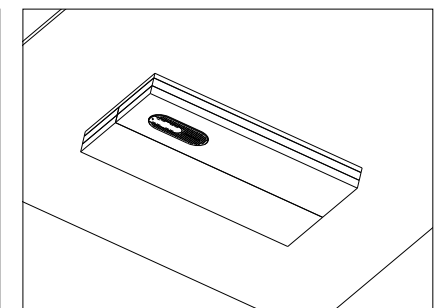

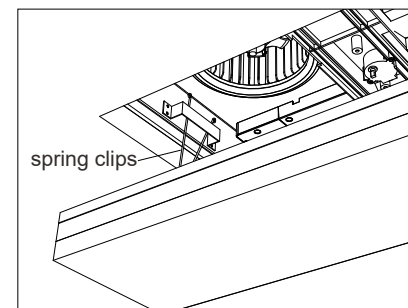

Step 8 Correctly Connect the Panel

Correctly connect the panel ② to the machine ① to ensure the machine can operate safely.

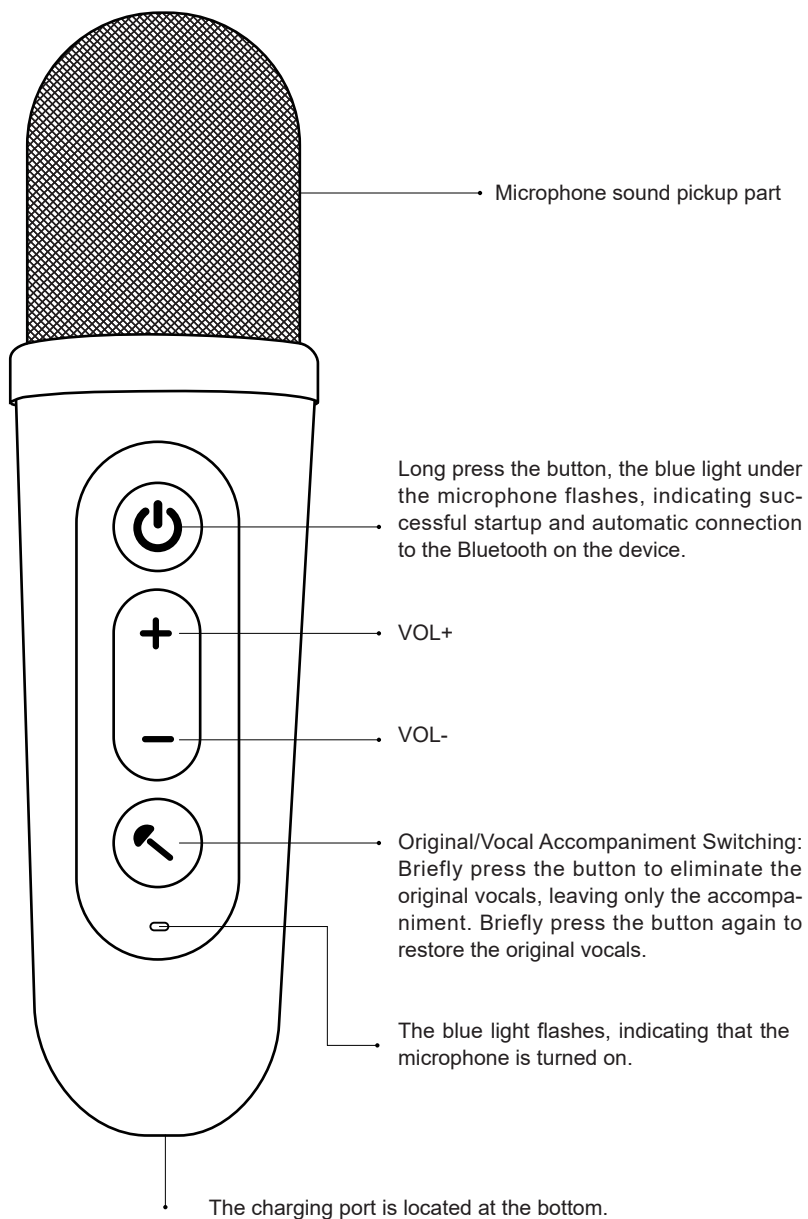

Step 9 Compress the Spring Clips on Both Sides

Compress the spring clips on both sides, push them into the machine until they pop out, and the installation is complete.

ABOUT OPERATION/CONTROL

Product Instructions:

The panel slides open only when functions are operating (including fan, heating, ventilation) or when music is playing.

When the purification function is turned on, the set humidity is displayed; when turned off, the actual humidity is shown.

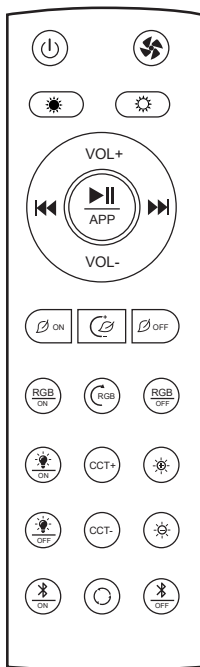

Indicator light color descriptions

- Power on, display green.
Indicates good air quality, the fan remains off.
- Indicates poor air quality, the fan turns on automatically for ventilation.
- Indicates that the low warmth function is activated.
- Indicates that the high warmth function is activated.
- Indicates that the air blowing function is activated.
- Indicates that the ventilation function is turned on.

ABOUT OPERATION/CONTROL

Remote Control Operation :

* Note:

Please make sure the time exceed 1s when switching between different keys of the remote control. If the time is less than 0.5s, the receiver of the remote control may not be able to obtain a signal to respond because the receiving time is too short.

ON/OFF: Short press to power on or off. After initial startup, the display lights up with default activation of: purification function (green indicator), lighting function (warm light), and Bluetooth function. (The device will remember the pre-shutdown status and determine whether to activate these three functions upon next startup.)

Fan(on/off): Short press to turn the fan on, the indicator light is blue. Press again to turn off the function.

High Warmth Mode(on/off): Short press to turn on the High warmth function, the indicator light is red. Press again to turn off the function.

ABOUT OPERATION/CONTROL

Low Warmth Mode(on/off): Short press to turn on the Low warmth function, the indicator light is orange. Press again to turn off the function.

Ventilation: Short press to turn the ventilation on, the indicator light is white. Press again to turn off the function.

Sensor(on): Upon initial power-on, the sensor function is enabled by default. Press to turn on, activating temperature/humidity and odor level detection mode.

- The green indicator light indicates good air quality.
- The purple indicator light indicates poor air quality. (The fan automatically turns on to initiate ventilation when air quality deteriorates or when the set humidity level is lower than the actual ambient humidity.)

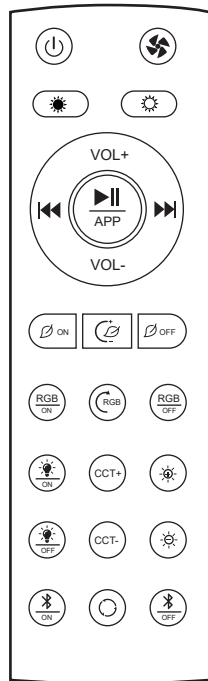

Sensor: When the purification function is enabled, press the button to cycle through humidity level settings: 30%, 60%, or 80%. (If the set humidity is lower than the actual ambient humidity, the device will automatically activate ventilation.)

Sensor(off): Short press to turn off the sensor function, the indicator light is off.
