5 Steps to unpacking

1

Make sure to place the mattress on flat and clean place. (Please note: mattress may get dirty if it is not open in clean place.)

2

Open the film by hand. Do not use scissors as this may damage the inner PVC vacuum bag or scratch the mattress fabric.

3

Carefully roll out the vacuum sealed mattress on the bed or clean place.

4

Cut the edge of the vacuum bag and wait for the magic.

5

Remove the vacuum bag and enjoy the sleep. (Fully expand may take about 24~72 hours)

Cautions:

1. Be careful and keep enough distance to the mattress when unwrapping the mattress at 2nd step, as it may expand very quick and may hurt people around it. So also keep your child away from the mattress when opening.

2. Please tidy the top and the border to help the mattress recovery to it original shape. As the mattress is machine rolled and compressed for efficient delivery, so the mattress is slightly wrinkled and it will recover after a few days.
