Here are some important installation guidelines:

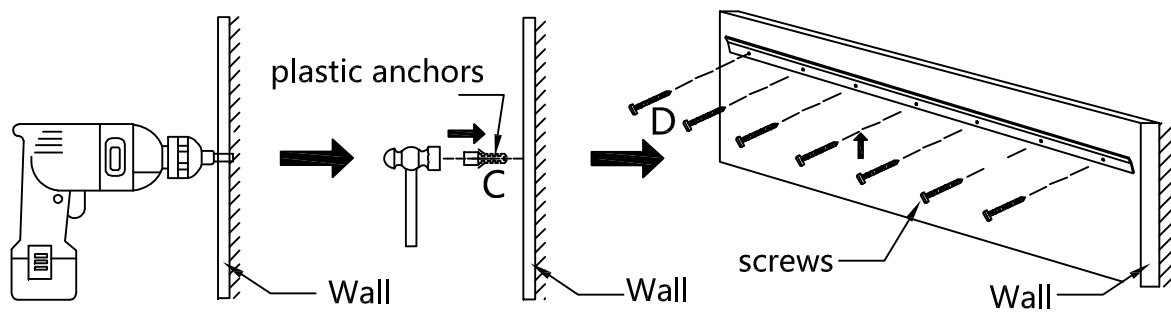

1. This floating shelf is not suitable for hollow or drywall installation.
2. Ensure that you mount the shelf on a flat and solid surface to prevent instability caused by uneven walls.
3. We recommend having two people assist with the installation, especially when securing the top and bottom panels, for safety and convenience.
4. Avoid over-tightening the screws, as this may damage the material or screw holes.
5. When moving the product, please lift it with two people to prevent scratching the walls or damaging the shelf.
