

The Runway Light Pendant™ (clear) – 120V, 6w/580 lumen, LED, dimming

Industrial LED pendant made from a Fresnel lenses dome providing a distinctive visual decor to your kitchen, office, bar or restaurant. Achieve a rustic industrial or a modern look that people will notice and appreciate the optical performance & origins. Each LED fixture is ready to hang with hardware & instructions.

RunwayLights™ are made from industrial parts called landing lights, or guidance lighting at airports, airfield and airstrips. They can be seen at railroad crossings, bridges. AKA obstruction lights, beacon lights or warning lights on towers and other tall structures.

Fresnel Optic Lens – Curved surfaces are replaced with flat surfaces or ridges creating an array of radiant prism rings with steeper prisms on the edges, and a flat or slightly convex center. This create a **lighthouse or beacon effect** distributing the illumination throughout the whole fixture and intensifying it into parallel illuminating beams at the center. We place the bulb toward the bottom for task lighting and use the Fresnel optics create a diffused glowing effect. You will find this lighting effect very pleasing to look as it delivers illumination to the work surface. The Fresnel optics reduces glare, making the fixture glow and radiate light.

The glass dome and the electrical fixtures are all made in the USA meeting all NEC Standards and can be tested & UL labeled if needed for an additional cost. The pendant comes ready to hang with instructions, canopy, hardware and bulb.

(See additional lights & accessories for additional options)

Includes: (ready to hang)
